Güiza, 2021-04-10 This book gathers the proceedings of the 17th International Conference on Intracranial Pressure and Neuromonitoring held in Leuven Belgium in September 2019 It provides an overview of the current understanding underlying research and future perspectives concerning pathophysiology biophysics monitoring and management in traumatic and non traumatic acute brain injury hydrocephalus and spinal cord injury including cerebrovascular autoregulation impairment in neurological as well as non neurological diseases The peer reviewed contributions were prepared by specialists in neurosurgery neurointensive care and neuroanesthesiology as well as prominent experts from the fields of physiology clinical and biomedical engineering mathematics and informatics The book continues the time honored tradition of publishing key presentations from the ICP Conferences in order to facilitate their dissemination within the clinical and research community Challenging the Functional Connectivity Disruption in Neurodegenerative Diseases:

New Therapeutic Perspectives through Non-Invasive Neuromodulation and Cutting-Edge Technologies Giancarlo Zito, Takashi Hanakawa, Luca Berdondini, Lorenzo Masia, Lorenzo Natale, 2018-10-05 The neurorehabilitation field is increasingly focused on understanding how to efficiently revert the effects that acute i.e stroke or traumatic brain injury or chronic i.e neurodegenerative diseases insults play either on small or large scale networks encompassing motor sensory and cognitive domains The link between the disrupted neuronal pulse generators and their effectors is being re shaped through a wide scenario that embraces biorobotics robot aided rehabilitation non invasive neurostimulation nanoprosthetics and neuroengineering For the past decade and at an amazing speed large investments and efforts allowed enthusiastic and only apparently heterogeneous researchers to borrow theories from neurophysiology pharmacology physics and quantum mechanics in order to generate together highly sophisticated tools that restore resemble or even substitute the basic biological architecture The idea of actually reverting weakened functions and or replacing the faulty parts either of the human body or the central and peripheral nervous system is becoming a new reality opening a fascinating era in this field In this Research Topic several researchers showed how the above principles became reality from theory to the bedside of patients providing full explanations of the whole mechanistic processes and how they were implemented up to the final stage

Schlegel, 2010-01-01 Present Your Research to the World The World

Congress 2009 on Medical Physics and Biomedical Engineering the triennial scientific meeting of the IUPESM is the world's leading forum for presenting the results of current scientific work in health related physics and technologies to an international audience. With more than 2 800 presentations it will be the biggest conference in the fields of Medical Physics and Biomedical Engineering in 2009. Medical physics, biomedical engineering and bioengineering have been driving forces of innovation and progress in medicine and healthcare over the past two decades. As new key technologies arise with significant potential to open new options in diagnostics and therapeutics it is a multidisciplinary task to evaluate their benefit for medicine and healthcare with respect to the quality of performance and therapeutic output. Covering key aspects such as information and communication technologies, micro and nanosystems, optics and biotechnology, the congress will serve as an inter- and multidisciplinary platform that brings together people from basic research, R D, industry and medical application to discuss these issues. As a major event for science, medicine and technology, the congress provides a comprehensive overview and in-depth first hand information on new developments, advanced technologies and current and future applications. With this Final Program we would like to give you an overview of the dimension of the congress and invite you to join us in Munich.

Brain Connectivity in Autism Rajesh K. Kana, Lucina Q. Uddin, Tal Kenet, Diane Chugani, Ralph-Axel Müller, 2014-09-23

The brain's ability to process information crucially relies on connectivity. Understanding how the brain processes complex information and how such abilities are disrupted in individuals with neuropsychological disorders will require an improved understanding of brain connectivity. Autism is an intriguingly complex neurodevelopmental disorder with

multidimensional symptoms and cognitive characteristics A biological origin for autism spectrum disorders ASD had been proposed even in the earliest published accounts Kanner 1943 Asperger 1944 Despite decades of research a focal neurobiological marker for autism has been elusive Nevertheless disruptions in interregional and functional and anatomical connectivity have been a hallmark of neural functioning in ASD Theoretical accounts of connectivity perceive ASD as a cognitive and neurobiological disorder associated with altered functioning of integrative circuitry Neuroimaging studies have reported disruptions in functional connectivity synchronization of activated brain areas during cognitive tasks and during task free resting states While these insights are valuable they do not address the time lagged causality and directionality of such correlations Despite the general promise of the connectivity account of ASD inconsistencies and methodological differences among studies call for more thorough investigations A comprehensive neurological account of ASD should incorporate functional effective and anatomical connectivity measures and test the diagnostic utility of such measures In addition questions pertaining to how cognitive and behavioral intervention can target connection abnormalities in ASD should be addressed This research topic of the Frontiers in Human Neuroscience addresses Brain Connectivity in Autism primarily from cognitive neuroscience and neuroimaging perspectives

Patch-Clamp Methods and Protocols Peter Molnar, James J. Hickman, 2007 Patch Clamp Methods and Protocols surveys the typical patch clamp applications and advises scientists on identifying problems and selecting the best technique in each instance The experiments described require a basic level of electrophysiological training and aid the researcher in pursuing new areas of electrophysiology and using the patch clamp technique effectively Patch Clamp Methods and Protocols is divided into three sections that cover the major areas of patch clamp application Pharmacology Physiology and Biophysics The first section provides examples and step by step instructions on how to use whole cell and single channel patch clamp methods for testing drugs in industrial settings The second section provides a wide selection of patch clamp applications in physiological studies The last part focuses on the biophysical applications of the patch clamp method using single channel recordings or statistical analysis of whole cell currents in order to obtain parameters that describe ion channel properties or transmitter release Individual techniques are explored within the area that they are applied most often Researchers will find Patch Clamp Methods and Protocols to be an invaluable aid in the design and execution of a wide variety of patch clamp experiments both on their own and in conjunction with other state of the art methodologies
