Matiere Derobee:

La matière dérobée Michel Paty, 1988 *Quantum Mechanics, Mathematics, Cognition and Action* Mioara Mugur-Schächter, Alwyn van der Merwe, 2006-04-11 And starting from there it can induce an explicit understanding of certain fundamental features of the new scientific thinking A formalized epistemology should not be mistaken for a crossdisciplinary or a multidisciplinary project The latter projects are designed to offer to nonspecialists access to information to results obtained inside specialized disciplines as well as a certain understanding of these results whereas a formalized epistemology should equip anyone with a framework for conceptualizing himself in whatever domain and direction he or she might choose A formalized epistemology should not be mistaken either for an approach belonging to the modern cognitive sciences *The Children of Time* Rémy Lestienne, 1995 A work of scientific substance and critical wisdom developed in the urbane idiom of a French scholar J T Fraser founder International Society for the Study of Time This is the book for those of us who couldn't wade completely through Hawking's A Brief History of Time and now have it collecting dust on our bookshelves Well written thought provoking and most important understandable Michael Epstein analytical spectroscopist chemist National Institute of Standards and Technology What is time Does it really pass These and other fascinating questions about the nature of time animate a continuing philosophical and scientific debate In this popular French book now available for the first time in English my Lestienne moves to make the bewildering concepts of time accessible and interesting He uses Galileo Newton Einstein and others to demonstrate how the concepts of causality and entropy became so pervasive that they eventually were substituted for time itself He also shows how recent advances in astronomy particle physics developmental life sciences and the neurosciences are helping to shape a new philosophical vision of time *History, Historicity and Science* Joseph Margolis, 2016-12-05 This fresh collection of essays questions how the historical process affects our conception of science including our understanding of its validity as well as our general conception of knowledge The essays in this book consider the philosophical labours spanning the work of Descartes Kant and Hegel still the philosophical basis of our modern understanding of science as well as recent selected philosophers and historians of science such as Kuhn and Feyerabend Themes raised include the philosophical basis for the validity of science the possibility of ever knowing the independent world as it truly is and the intelligibility of construing scientific knowledge as a historical Taken separately and together these essays provide a sustained analysis of scientific claims to objective standing the historicity of thought and inquiry They point toward unfinished philosophical business and the need for a new beginning

Constructivism and Practice Carol C. Gould, 2003 Constructivism and Practice advances the understanding of the role of construction and model creation and reflects on the relationship of these models to social practices **Revisiting the Foundations of Relativistic Physics** Ashtekar, 2011-06-28 This book is for physicists historians and philosophers of physics as well as students seeking an introduction to ongoing debates in relativistic and quantum physics This title is unique in that

it comprises contributions by leading physicists philosophers and historians of science it covers the recent debates on the emergence of relativity and quantum theory it includes chapters with an introductory character comprehensible to students and science teachers it can be used in graduate level courses in the history and philosophy of science it strengthens the bonds between the communities of scientists historians and philosophers

Spinoza and the Sciences Marjorie Grene, Debra Nails, 1986-07-31 Prefatory Explanation It must be remarked at once that I am editor of this volume only in that I had the honor of presiding at the symposium on Spinoza and the Sciences at which a number of these papers were presented exceptions are those by Hans Jonas Richard Popkin Joe VanZandt and our four European contributors in that I have given some editorial advice on details of some of the papers including translations and finally in that my name appears on the cover The choice of speakers and of additional contributors is entirely due to Robert Cohen and Debra Nails and nearly all the burden of readying the manuscript for the press has been borne by the latter In the introduction to another anthology on Spinoza I opened my remarks by quoting a statement of Sir Stuart Hampshire about interpretations of Spinoza's chief work All these masks have been fitted on him and each of them does to some extent fit But they remain masks not the living face They do not show the moving tensions and unresolved conflicts in Spinoza's Ethics Hampshire 1973 p 297 The double theme of moving tensions and unresolved conflicts seems even more appropriate to the present volume What is Spinoza's relation to the sciences The answers are many and they criss cross one another in a number of complicated ways

The Quest for Unity Étienne Klein, Marc Lachièze-Rey, 1999 Contains revelations on how the quest for unity has driven all the great breakthroughs in science and shows how the Greeks searched for the fundamental element in all things

Why Science Needs Metaphysics Elie Zahar, 2007 As notions of postmodernism and deconstruction have become exceedingly fashionable in recent times scholars have attempted to remake epistemology as a subjectivist enterprise Why Science Needs Metaphysics deplores this state of affairs and attempts to correct it by reviving rational metaphysics as well as some of the sound ideas of the Vienna circle A rational metaphysics maintains that the world around us is real and has a specific nature independent of our thoughts or feelings In arguing for a rational metaphysics Zahar corrects and

extends Karl Popper's approach to epistemological problems and develops Lakatos's Methodology of Scientific Research Programs into his own methodology. The book ends with two short case studies: one on the development of atomic theory and the other on Einstein's philosophy of science. Both illustrate that realist metaphysics are crucial to the work of our greatest scientists.
