**Foundations of Computational Finance with MATLAB** Ed McCarthy, 2018-05-22 Graduate from Excel to MATLAB to keep up with the evolution of finance data. Foundations of Computational Finance with MATLAB is an introductory text for both finance professionals looking to branch out from the spreadsheet and for programmers who wish to learn more about finance. As financial data grows in volume and complexity, its very nature has changed to the extent that traditional financial calculators and spreadsheet programs are simply no longer enough. Today's analysts need more powerful data solutions with more customization and visualization capabilities, and MATLAB provides all of this and more in an easy-to-learn skillset. This book walks you through the basics and then shows you how to stretch your new skills to create customized solutions. Part I demonstrates MATLAB's capabilities as they apply to traditional finance concepts, and PART II shows you how to create interactive and reusable code that links with external data sources, communicates graphically, and more. Master MATLAB's basic operations, including matrices, arrays, and flexible data structures. Learn how to build your own customized solutions when the built-ins just won't do. Learn how to handle financial data and industry-specific variables, including risk and uncertainty. Adopt more accurate modeling practices for portfolios, options, time series, and more. MATLAB is an integrated development environment that includes everything you need in one well-designed user interface. Available Toolboxes provide tested algorithms that save you hours of code, and the skills you learn using MATLAB make it easier to learn additional languages if you choose to do so. Financial firms are catching up to universities in MATLAB usage, so this is a skill set that will follow you throughout your career. When you're ready to step into the new age of finance, Foundations of Computational Finance with MATLAB provides the expert instruction you need to get started quickly.

**Dynamical Systems with Applications using MATLAB®** Stephen Lynch, 2013-12-01 Beginning with a tutorial guide to MATLAB, the text thereafter is divided into two main areas. In Part I, both real and complex discrete dynamical systems are considered, with examples presented from population dynamics, nonlinear optics, and materials science. Part II includes examples from mechanical systems, chemical kinetics, electric circuits, economics, population dynamics, epidemiology, and neural networks. Common themes such as bifurcation, bistability, chaos, fractals, instability, multistability, periodicity, and quasiperiodicity run through several chapters. Chaos control and multifractal theories are also included, along with an example of chaos synchronization. Some material deals with cutting-edge published research articles and provides a useful resource for open problems in nonlinear dynamical systems. Readers are guided through theory via example, and the graphical MATLAB interface. The Simulink accessory is used

to simulate real world dynamical processes Examples from mechanics electric circuits economics population dynamics epidemiology nonlinear optics materials science and neural networks Over 330 illustrations 300 examples and exercises with solutions Aimed at senior undergraduates graduate students and working scientists in various branches of engineering applied mathematics and the natural sciences      **Numerical Methods with Chemical Engineering Applications** Kevin D.
