Modeling Environmental Policy:

Modeling Environmental Policy Wade E. Martin, Lisa A. McDonald, 2012-12-06 Modeling Environmental Policy demonstrates the link between physical models of the environment and policy analysis in support of policy making Each chapter addresses an environmental policy issue using a quantitative modeling approach The volume addresses three general areas of environmental policy non point source pollution in the agricultural sector pollution generated in the extractive industries and transboundary pollutants from burning fossil fuels The book concludes by discussing the modeling efforts and the use of mathematical models in general *Economic Models of Material-Product Chains for Environmental Policy*

Analysis P.P. Kandelaars, 2013-11-21 A theoretical and empirical contribution to the quest for sustainability and environmental quality The book examines the physical and economic aspects of flows of materials and products as well as the policies and strategies designed to reduce the related resource depletion and environmental pollution The material product chain concept forms a general framework defined as a system of linked flows of materials and products that support the provision of a certain service Various economic models of material product chains are studied both theoretical and applied such as static optimisation dynamic simulation and general equilibrium models Applications to metals rain gutters and window frames are described Audience Readers in universities research organizations and policy institutes interested in the environment economics and government policy **Modeling Environment-Improving Technological Innovations**

Under Uncertainty Alexander Golub, Anil Markandya, 2008-12-08 This book presents a compendium of methodologies for evaluating the economic impact of technological innovation upon climate change policy There is a broad consensus on the key elements of climate change science and agreement that near term actions are needed to prevent dangerous anthropogenic interference with the climate system However there is little agreement on the costs and benefits of climate policy Any policy implementation will result in an irreversible but environment improving investment in alternative technologies this change will generate immediately realized costs but significantly delayed benefits Hence a critical element in policy selection is the inherent uncertainty in the climate and economy that can be expected over time *Using*

Empirical Studies of Environmental Policies in

Europe John W. Maxwell, Jürgen von Hagen, 2012-12-06 John W Maxwell and Jiirgen von Hagen Kelley School of Business Indiana University ZEI University of Bonn Indiana University and CEPR Prior to the 1970 s economic studies of the natural environment were chiefly concerned with the optimal extraction of natural resources such as oil coal and timber This focus reflected the commonly held belief that the natural environmental was sufficient to sustain the world s population in relative comfort at least in developed nations and was there for the taking By the late 1960 s however the spectacular levels of economic growth that had taken place since the Second World War began to exact a visible toll on the natural environment

This visibility prompted growing concern for the environment among activists government officials academics and the public This concern has followed a general upward though cyclic trend to the present day Remarkable events during this trend include the issuing of the Brundtland report and the world environmental summits held in Rio and Kyoto Concern for the natural environment has impacted the discipline of economics resulting in the birth of the field of environmental economics that has recently eclipsed in popularity its parent field of natural resource economics

Handbook of Merger Control and Environmental Policy Luis Gautier, Mahelet G. Fikru, 2024-07-27 This book presents an integrated theory of firms strategies and two types of policies namely environmental policies and merger control policies It develops a framework to examine the intricate relationship between merger and acquisition M A incentives merger control policy environmental policies and firms sustainability practices The chapters highlight the importance of policy coordination to underscore the link between M A and environmental externality and the link between merger policy and environmental policy Drawing together related fields that are seldom linked in the literature this volume offers a comprehensive and authoritative reference for scholars graduate students and policymakers

Energy Abstracts for Policy Analysis, 1984 *Economic Incentives and Environmental Policies* Johannes Baptist Opschoor, R. Kerry Turner, 1994 This text contains a collection of papers on economic incentives and environmental policies which result from the authors joint research work in the program Environment Science and Society conducted under the auspices of the European Science Foundation

Models in Environmental Regulatory Decision Making National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Models in the Regulatory Decision Process, 2007-07-25 Many regulations issued by the U S Environmental Protection Agency EPA are based on the results of computer models Models help EPA explain environmental phenomena in settings where direct observations are limited or unavailable and anticipate the effects of agency policies on the environment human health and the economy Given the critical role played by models the EPA asked the National Research Council to assess scientific issues related to the agency s selection and use of models in its decisions The book recommends a series of guidelines and principles for improving agency models and decision making processes The centerpiece of the book s recommended vision is a life cycle approach to model evaluation which includes peer review corroboration of results and other activities This will enhance the agency s ability to respond to requirements from a 2001 law on information quality and improve policy development and implementation

Theory and Implementation of Economic Models for Sustainable Development J.C. van den Bergh, M.W. Hofkes, 2013-03-09 There is widespread concern for long term environmental issues in relation to economic processes and developments Among the concerned scientists are economists who have taken up the challenge to apply economic insights and tools for the study of long term environment economy interactions and to give the concept of sustainable development economic hands and feet This book presents a pluralistic perspective on efforts problems and successes in this area This collection of papers was originally prepared for an

international symposium titled Economic Modelling of Sustainable Development Between Theory and Practice which was hosted by the Vrije Universiteit in Amsterdam on December 20th 1996 The main motivation for this symposium was that the usefulness of the concept of sustainable development for theoretical and applied modelling is still being debated growth theorists resource economists ecological economists policy makers and many others are trying to deal with the concept in various and sometimes conflicting ways The aim of the symposium was to bring together different theoretical and implementational perspectives on modelling for sustainable development We hope that this volume will inform a wide audience about the perspectives and progress in this important area of research as well as stimulate further research notably on applied modelling and practical methods for the analysis of sustainable development at various spatial scales The papers have in due course been revised several times based on comments made by discussants referees and the editors *Energy Research Abstracts*, 1986

Environmental Modeling with Stakeholders Steven Gray, Michael Paolisso, Rebecca Jordan, Stefan Gray, 2016-12-16 This volume brings together in a central text chapters written by leading scholars working at the intersection of modeling the natural and social sciences and public participation This book presents the current state of knowledge regarding the theory and practice of engaging stakeholders in environmental modeling for decision making and includes basic theoretical considerations an overview of methods and tools available and case study examples of these principles and methods in practice Although there has been a significant increase in research and development regarding participatory modeling a unifying text that provides an overview of the different methodologies available to scholars and a systematic review of case study applications has been largely unavailable This edited volume seeks to address a gap in the literature and provide a primer that addresses the growing demand to adopt and apply a range of modeling methods that includes the public in environmental assessment and management The book is divided into two main sections The first part of the book covers basic considerations for including stakeholders in the modeling process and its intersection with the theory and practice of public participation in environmental decision making The second part of the book is devoted to specific applications and products of the various methods available through case study examination This second part of the book also provides insight from several international experts currently working in the field about their approaches types of interactions with stakeholders models produced and the challenges they perceived based on their practical experiences
