Computer Performance Evaluation Günter Haring, Gabriele Kotsis, 1994-04-20. Performance, evaluation, reliability and performability are key factors in the development and improvement of computer systems and computer networks. This volume contains the 25 accepted and invited papers presented at the 7th International Conference on Modelling Techniques and Tools for Computer Performance Evaluation. The papers focus on new techniques and the extension of existing techniques for performance and reliability analysis. Tools to support performance and reliability modelling and measurement in all kinds of applications and environments are presented and the practicability and generality of the approaches are emphasized. The volume summarizes the state of the art and points out future demands and challenges and will interest both scientists and practitioners.

Lectures on Formal Methods and Performance Analysis Ed Brinksma, Holger Hermanns, Joost-Pieter Katoen, 2003-06-29. Traditionally, models and methods for the analysis of the functional correctness of reactive systems and those for the analysis of their performance and dependability aspects have been studied by different research communities. This has resulted in the development of successful but distinct and largely unrelated modeling and analysis techniques for both domains. In many modern systems, however, the difference between their functional features and their performance properties has become blurred as relevant functionalities become inextricably linked to performance aspects, e.g. isochronous data transfer for live video transmission. During the last decade, this trend has motivated an increased interest in combining insights and results from the field of formal methods traditionally focused on functionality with techniques for performance modeling and analysis. Prominent examples of this cross fertilization are extensions of process algebra and Petri nets that allow for the

automatic generation of performance models the use of formal proof techniques to assess the correctness of randomized algorithms and extensions of model checking techniques to analyze performance requirements automatically We believe that these developments mark the beginning of a new paradigm for the modeling and analysis of systems in which qualitative and quantitative aspects are studied from an integrated perspective We are convinced that the further work towards the realization of this goal will be a growing source of inspiration and progress for both communities

Model-Based Software Performance Analysis Vittorio Cortellessa, Antiniscia Di Marco, Paola Inverardi, 2011-05-05 Poor performance is one of the main quality related shortcomings that cause software projects to fail Thus the need to address performance concerns early during the software development process is fully acknowledged and there is a growing interest in the research and software industry communities towards techniques methods and tools that permit to manage system performance concerns as an integral part of software engineering Model based software performance analysis introduces performance concerns in the scope of software modeling thus allowing the developer to carry on performance analysis throughout the software lifecycle With this book Cortellessa Di Marco and Inverardi provide the cross knowledge that allows developers to tackle software performance issues from the very early phases of software development They explain the basic concepts of performance analysis and describe the most representative methodologies used to annotate and transform software models into performance models To this end they go all the way from performance primers through software and performance modeling notations to the latest transformation based methodologies As a result their book is a self contained reference text on software performance engineering from which different target groups will benefit professional software engineers and graduate students in software engineering will learn both basic concepts of performance modeling and new methodologies while performance specialists will find out how to investigate software performance model building

Computer Performance Evaluation Ramon Puigjaner, Nunzio N.

Savino, Bartomeu Serra, 2003-06-26 The need to evaluate computer and communication systems performance and dependability is continuously growing as a consequence of both the increasing complexity of systems and the user requirements in terms of timing behaviour The 10th International Conference on Modelling Techniques and Tools for Computer Performance Evaluation held in Palma in September 1998 was organised with the aim of creating a forum in which both theoreticians and practitioners could interchange recent techniques tools and experiences in these areas This meeting follows the predecessor conferences of this series 1984 Paris 1988 Palma 1994 Wien 1985 Sophia Antipolis 1991 Torino 1995 Heidelberg 1987 Paris 1992 Edinburgh 1997 Saint Malo The tradition of this conference series continued this year where many high quality papers were submitted The Programme Committee had a difficult task in selecting the best papers Many papers could not be included in the program due to space constraints All accepted papers are included in this volume Also a set of submissions describing performance modelling tools was transformed into tool presentations and demonstrations A brief description of these tools is included in this volume The following table gives the overall statistics for the submissions

7th UK Computer and Telecommunications Performance Engineering Workshop Jane E. Hillston, Peter J.B. King, Robert J. Pooley, 2013-06-29 Performance engineering is a fast moving field where advances in technology mean that new issues constantly need to be addressed In response to this the UK Computer and Telecommunications Performance Engineering workshops were set up in 1985 to provide a valuable opportunity for the discussion and exchange of ideas They have subsequently become well established as the focus for academic and industrial practitioners from the UK and Europe with an interest in performance and modelling and analysis This volume contains the 16 papers which were presented at the 7th annual workshop held in Edinburgh in July 1991 The workshop highlighted various aspects of parallel computing an area which is attracting an increasing amount of interest and the work presented in these papers is of particular interest as the contributors used real analysis to evaluate their models The papers cover an unusually wide range of topics both practical and theoretical including advances in queueing theory common performance problems and their solutions assessments of available tools and presentations of new theoretical results The result is an extremely comprehensive coverage of this important and challenging field This volume provides an up to date assessment of work being carried out by performance engineers in the UK and Europe and will be an invaluable reference book for researchers and practitioners wishing to familiarise themselves with the benefits of performance and analysis
