Harvey, Tommaso Proietti, 2005 This volume presents a collection of readings which give the reader an idea of the nature and scope of unobserved components UC models and the methods used to deal with them The book is intended to give a self contained presentation of the methods and applicative issues Harvey has made major contributions to this field and provides substantial introductions throughout the book to form a unified view of the literature About the Series Advanced Texts in Econometrics is a distinguished and rapidly expanding series in which leading econometricians assess recent developments in such areas as stochastic probability panel and time series data analysis modeling and cointegration In both hardback and affordable paperback each volume explains the nature and applicability of a topic in greater depth than possible in introductory textbooks or single journal articles Each definitive work is formatted to be as accessible and convenient for those who are not familiar with the detailed primary literature *Economics and History* David Greasley, Les Oxley, 2011-10-13 Economics and History presents six state of the art surveys from some of the leading scholars in cliometrics The contributions are all written at an accessible level for the non specialist reader and consider a broad range of issues from this highly topical area Written clearly and comprehensively allowing easy accessibility for the non specialist reader Brings together the very latest research in this highly topical subject from leading scholars Contributions cover a broad range of areas within this subject The latest publication in the highly successful Surveys of Recent Research in Economics Book Series *Housing Markets in Europe* Olivier de Bandt, Thomas Knetsch, Juan

Peñalosa, Francesco Zollino, 2010-10-14 During the recession in the years 2008 2009 the most severe for mature economies in the post war period housing markets were often mentioned as having a special responsibility The objective of this book is to shed light on the cyclical behaviour of the housing markets its fundamental determinants in terms of supply and demand characteristics and its relationship with the overall business cycle The co movements of house prices across countries are also considered as well as the channel of transmission of house price changes to the rest of the economy Particular attention is paid to the effects on private consumption through possible wealth effects The book is a compilation of original papers produced by economists and researchers from the four main national central banks in the euro area also with the participation of leading academics

*Building Cycles* Richard Barras, 2009-08-13 The global economic crisis of 2008 was precipitated by a housing market crash thus highlighting the destabilizing influence of the property cycle upon the wider economy This timely book by a world authority explores why cycles occur and how they affect the behaviour of real estate markets The central argument put forward is that growth and instability are inextricably linked and that building investment acts both as a key driver of growth and as the source of the most volatile cyclical fluctuations in an economy The role of building cycles in both economic growth and urban development is explored through a theoretical review and a comparative historical analysis of UK and US national data stretching back to the start of the nineteenth century together with a case study of the development of London since the start of the eighteenth century A simulation model of the building cycle is presented and tested using data for the City of London office market The analysis is then broadened to examine the operation of property cycles in global investment markets during the post war period focussing on their contribution to the diffusion of innovation the accumulation of wealth and the propagation of market instability *Building Cycles* growth instability concludes by synthesizing the main themes into a theoretical framework which can guide our understanding of the operation and impact of building cycles on the modern economy Postgraduate students on courses in property and in urban development as well as professional property researchers urban economists and planners will find this a stimulating read demanding but accessible

Monetary and Banking History Geoffrey Wood, Terence Mills, Nicholas Crafts, 2011-05-11 Forrest Capie is an eminent economic historian who has published extensively on a wide range of topics with an emphasis on banking and monetary history particularly in the nineteenth and twentieth centuries but also in other areas such as tariffs and the interwar economy He is a former editor of the *Economic History Review* one of the leading academic journals in this discipline Under the steely editorship of Geoffrey Wood this book brings together a stellar line of contributors including Charles Goodhart Harold James Michael Bordo Barry Eichengreen Charles Calomiris and Anna Schwartz The book analyzes many of the mainstream themes in economic and financial history monetary policy international financial regulation economic performance exchange rate systems international trade banking and financial markets where historical perspectives are considered important The current wave of globalisation has stimulated interest in many of these areas as

lessons of history are sought These themes also reflect the breadth of Capie's work in terms of time periods and topics **A**  
**History of Market Performance** R.J. Van der Spek, Jan Luiten van Zanden, Bas van Leeuwen, 2014-09-04 This exciting new  
 volume examines the development of market performance from Antiquity until the dawn of the Industrial Revolution Efficient  
 market structures are agreed by most economists to serve as evidence of economic prosperity and to be prerequisites for  
 further economic growth However this is the first study to examine market performance as a whole over such a large time  
 period Presenting a hitherto unknown and inaccessible corpus of data from ancient Babylonia this international set of  
 contributors are for the first time able to offer an in depth study of market performance over a period of 2 500 years The  
 contributions focus on the market of staple crops as they were crucial goods in these societies Over this entire period all  
 papers provide a similar conceptual and methodological framework resting on a common definition of market performance  
 combined with qualitative and quantitative analyses resting on new and improved price data In this way the book is able to  
 combine analysis of the Babylonian period with similar work on the Roman Early and Late Medieval and Early Modern period  
 Bringing together input from assyriologists ancient historians economic historians and economists this volume will be crucial  
 reading for all those with an interest in ancient history economic history and economics **Econometric Business Cycle**  
**Research** Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research  
 EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle  
 theories EBCR combines economic theory and measurement in the study of business cycles i.e. ups and downs in overall  
 economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector  
 autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the  
 methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one  
 Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the  
 Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation  
 models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly  
 detailed assessment of the methods and is not overturned in the empirical illustrations The main conclusion does not imply  
 the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose  
 equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle  
 indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in  
 current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and  
 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the  
 other three methods because RBC modellers are not interested in modelling business cycles on an observation per  
 observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles

to make them comparable      **Essays in Honour of Fabio Canova** Juan J. Dolado, Luca Gambetti, Christian Matthes, 2022-09-21 Both parts of Volume 44 of *Advances in Econometrics* pay tribute to Fabio Canova for his major contributions to economics over the last four decades      **System-Theoretic Methods in Economic Modelling I** S. Mittnik, 2014-06-28 The value of applying system theoretic concepts to economic modelling problems arises from the fact that it offers a unifying framework for modelling dynamic systems In addition to offering this powerful conceptual framework it provides a wide range of tools useful in applied work System theoretic techniques enter predominantly two stages of economic modelling efforts the stage of model construction and the stage of model application in accordance with the modelling The objective of this and subsequent volumes on System Theoretic Methods in Economic Modelling I is to initiate and or intensify dialogues between researchers and practitioners within and across the disciplines involved This first volume brings together papers exhibiting a wide range of system theoretic techniques and applications to economic problems The papers have been divided into two groups following roughly but not necessarily the above classification into the construction and application stages of economic modelling The papers in the first group focus on the identification of dynamic and static systems while the papers in the second group address dynamic optimization problems      *Journal of Economic Literature*, 2003      The Long-term Behavior of Commodity Prices Pier Giorgio Ardeni, Brian Wright, 1990 The long term net barter terms of trade between primary commodities and manufactures has been declining 0.6 percent a year      Modelling Macroeconomic Adjustment with Growth in Developing Economies Sushanta K. Mallick, 2018-08-13 First published in 1999 this influential volume explores Macroeconomic Adjustment with a particular focus on India Its inspiration originated from the introduction of stabilisation and structural adjustment policies in India in 1991 Mallick examines the application of this policy package by the International Monetary Fund and the World Bank to Developing Economies First looking at the initial conditions and generators of imbalances the appropriate policy framework for India's initial conditions and structural characteristics is considered While the effectiveness of the IMF had been strongly criticised Mallick explains how it could be used more effectively He argues that the programs applied are often contradictory and using India as an example examines the effects of policy reform on its trade sector the repercussions on the direct economy and the costs associated with such policies in restoring stability and future economic growth with particular support for the Vector Autoregression VAR framework Mallick forwards a new structural model for policy purposes evaluated for overall performance and optimal control
