

## Modelling agricultural runoff: Overview

J. Marsalek

Rivers Research Branch, National Water Research  
Institute, Burlington, Ontario, Canada L7R 4A6

**ABSTRACT** Approaches to the modelling of agricultural runoff pollution are examined, starting with the modelling objectives and the level of analysis, followed by model implementation, and overview of existing models. Further refinements of the modelling process and of the existing models are proposed.

## INTRODUCTION

In spite of recent improvements in point source control by technology-based effluent limitations, in many waters, the water quality goals and designated uses are unattainable without some control of nonpoint source pollution (Anon., 1986; Humenik *et al.*, 1987; Vigon, 1985). Consequently, the abatement of nonpoint source pollution is attracting more attention in water quality management as one of the major control options. Among nonpoint sources, agriculture is generally recognized as the most widespread primary cause of water quality problems in both rivers and lakes (Anon., 1986). Environmental and economic damage, caused by agricultural nonpoint pollution in the U.S.A., was estimated at six billion dollars annually (Duda, 1985). Consequently, much attention in the analysis of nonpoint pollution has been directed toward agricultural activities and particularly agricultural runoff.

In the analysis of agricultural runoff pollution, the preference is given to computer models because of the scope and complexity of the underlying issues. From a broader perspective, such models should be viewed as one of the components in an integrated system of models used in river basin management and their main function is to provide loading inputs to the receiving water quality models (Ongley *et al.*, 1988). Considering the high resource requirements for nonpoint modelling, there is a great need for rationalization of the modelling process. Toward this end, several reviews of agricultural runoff models were published recently and reflected the views of modellers (DeCoursey, 1988; Donigian & Rao, 1988; Leavesley *et al.*, 1988; Novotny, 1986; Reckhow *et al.*, 1985; Rose *et al.*, 1988) or users (Bailey & Swank, 1983; Crowder, 1987; Oliver *et al.*, 1988; Shaw & Falco, 1988). The paper that follows synthesizes and further expands such views in a broader context of water management.
