# SECOND LANGUAGE ACQUISITION

Second-language acquisition (SLA), sometimes called second-language learning — otherwise referred to as L2 (language 2) acquisition, is the process by which people learn a second language.

THE ACCULTURATION MODEL

Introduction

The Acculturation Model is one of the theories of second language acquisition proposed by John Schumann in 1978. The acculturation Model came into light by the practical study of Schumann on the non-English learners.

Definitions

The process of acculturation was defined by Brown as:

"the process of being adapted to a new culture" which involves a new orientation of thinking and feeling on the part of an L2 learner.

According to Oxford Learners' Dictionary, acculturation is:

"the process of learning to live successfully in a different culture; the process of helping somebody to do this. In other words, it stands for assimilation or digestion to a different culture, typically the dominant one".

Computational Modeling of Human Language Acquisition Afra Alishahi,2010-10-10 Human language acquisition has been studied for centuries but using computational modeling for such studies is a relatively recent trend However computational approaches to language learning have become increasingly popular mainly due to advances in developing machine learning techniques and the availability of vast collections of experimental data on child language learning and child adult interaction Many of the existing computational models attempt to study the complex task of learning a language under cognitive plausibility criteria such as memory and processing limitations that humans face and to explain the developmental stages observed in children By simulating the process of child language learning computational models can show us which linguistic representations are learnable from the input that children have access to and which mechanisms yield the same patterns of behaviour that children exhibit during this process In doing so computational modeling provides insight into the plausible mechanisms involved in human language acquisition and inspires the development of better language models and techniques This book provides an overview of the main research questions in the field of human language acquisition It reviews the most commonly used computational frameworks methodologies and resources for modeling child language learning and the evaluation techniques used for assessing these computational models The book is aimed at cognitive scientists who want to become familiar with the available computational methods for investigating problems related to human language acquisition as well as computational linguists who are interested in applying their skills to the study of child language acquisition Different aspects of language learning are discussed in separate chapters including the acquisition of the individual words the general regularities which govern word and sentence form and the associations between form and meaning For each of these aspects the challenges of the task are discussed and the relevant empirical findings on children are summarized Furthermore the existing computational models that attempt to simulate the task under study are reviewed and a number of case studies are presented Table of Contents Overview Computational Models of Language Learning Learning Words Putting Words Together Form Meaning Associations Final Thoughts **Models of Language Acquisition** Peter Broeder,Jaap Murre,2000 This book presents recent advances by leading researchers in computational modelling of language acquisition Sophisticated theoretical models can now be tested using simulation techniques and large corpora of linguistic data Renewed interest in learning neural networks and the ability to test new solutions to fundamental problems has fuelled debates in an already very active field The twenty four authors in this collection of new work have been drawn from departments of linguistics cognitive science psychology and computer science The book as a whole shows what light may be thrown on fundamental problems when powerful computational techniques are combined with real data A central question addressed in the book concerns the extent to which linguistic structure is readily available in the environment The

authors consider the evidence in relation to word boundaries and phonotactic structure stress patterns text to speech rules and the mapping of lexical semantics one author arguing that a childs own output may serve as a key source of linguistic input Linguistic structure environment relations are central to the debate on the degree to which language learning is inductive or deductive this issue is considered here in studies of the acquisition of pluralization and inflectional morphology The book examines the power and utility of different modeling formalisms for different problems and approaches how far for example can connectionist models be used as models for language acquisition or Simple Recurrent Networks form the basis of a model of language acquisition To what degree can lexical items and categories be used in the construction of neural network models or Markov chains be deployed to investigate the characteristics of a general language learning algorithm Triggering Learning Algorithm This book will appeal to linguists psychologists cognitive scientists working in language acquisition It will also interest those involved in computational modelling in linguistics and behavioural science **A Computational Model of Language Acquisition in the Two-year-old** Jane Anne Collins Hill,1983 **Manual of Language Acquisition** Christiane Fäcke,2014-08-25 This manual contains overviews on language acquisition and distinguishes between first and second language acquisition It also deals with Romance languages as foreign languages in the world and with language acquisition in some countries of the Romance speaking world This reference work will be helpful for researchers students and teachers interested in language acquisition in general and in Romance languages in particular **Neural Models of language Processes** Michael Arbib,2012-12-02 Neural Models of Language Processes offers an interdisciplinary approach to understanding the nature of human language and the means whereby we use it The book is organized into five parts Part I provides an opening framework that addresses three tasks to place neurolinguistics in current perspective to provide two case studies of aphasia and to discuss the rules of the game of the various disciplines that contribute to this volume Part II on artificial intelligence AI and processing models discusses the contribution of AI to neurolinguistics The chapters in this section introduce three AI systems for language perception the HWIM and HEARSAY systems that proceed from an acoustic input to a semantic interpretation of the utterance it represents and Marcus9 system for parsing sentences presented in text Studying these systems demonstrates the virtues of implemented or implementable models Part III on linguistic and psycholinguistic perspectives includes studies such as nonaphasic language behavior and the linguistics and psycholinguistics of sign language Part IV examines neurological perspectives such as the neuropathological basis of Broca s aphasia and the simulation of speech production without a computer Part V on neuroscience and brain theory includes studies such as the histology architectonics and asymmetry of language areas hierarchy and evolution in neurolinguistics and perceptual motor processes and the neural basis of language Handbook of Cognitive Linguistics and Second Language Acquisition Peter Robinson,Peter Jake Robinson,Nick C. Ellis,2008-02-21 Cognitive Linguistics Cl is an approach to the study of language informed by both linguistics and psychology It describes how

language interfaces with cognition and how it adapts in the course of language usage phylogeneticallv in language evolution ontogenetically in language acquisition and moment to moment in situated on line language processing and performance Second language Acquisition SLA involves the study of the cognitive representations and mechanisms of second language processing their time course of acquisition and where possible and feasible their relevance to instruction The Handbook of Cognitive Linguistics and Second language Acquisition brings these two areas of theory and research together

Connectionist Models of Development Philip T. Quinlan,2003 Connectionist Models of Development is an edited collection of essays on the current work concerning connectionist or neural network models of human development The brain comprises millions of nerve cells that share myriad connections and this book looks at how human development in these systems is typically characterised as adaptive changes to the strengths of these connections The traditional accounts of connectionist learning based on adaptive changes to weighted connections are explored alongside the dynamic accounts in which networks generate their own structures as learning proceeds Unlike most connectionist accounts of psychological processes which deal with the fully mature system this text brings to the fore a discussion of developmental processes To investigate human cognitive and perceptual development connectionist models of learning and representation are adopted alongside various aspects of language and knowledge acquisition There are sections on artificial intelligence and how computer programs have been designed to mimic the development processes as well as chapters which describe what is currently known about how real brains develop This book is a much needed addition to the existing literature on connectionist development as it includes up to date examples of research on current controversies in the field as well as new features such as genetic connectionism and biological theories of the brain It will be invaluable to academic researchers post graduates and undergraduates in developmental psychology and those researching connectionist neural networks as well as those in related fields such as psycholinguistics **A Dynamic Model of Multilingualism** Philip Herdina,Ulrike Jessner,2002 The model presented in this volume draws together various strands of research second language acquisition theory bilingualism research dynamic systems theory to develop a novel approach to this challenging subject Its main focus lies on the psycholinguistic dynamics of multilingualism the processes of change in time affecting two or more language systems **The Development of Language and Language Researchers** Frank S.
