

Expectations-Enhanced Models

Incorporate economic expectations, such as inflationary expectations.

Mathematical Models

Systems of simultaneous equations with an equal or greater number of economic variables.

Visual Models

Pictures of an abstract economy - graphs with curves and lines that tell an economic story.

Types of Economic Models

Simulation Models

Must be used with computers. They are fundamentally mathematical, but their mathematical complexity is transparent to the user.

Empirical Models

Mathematical models designed to be used with data.

Static & Dynamic Models

Most economic models are comparative static ones. Dynamic models incorporate time into their structure.

Models of Economic Systems Arnold H. Packer, 1972 This book at once introduces the entire area of adaptive modeling and precisely defines a new decision making procedure for developing and using models of large complex socioeconomic systems

Theory and Implementation of Economic Models for Sustainable Development J.C. van den Bergh, M.W. Hofkes, 2013-03-09 There is widespread concern for long term environmental issues in relation to economic processes and developments Among the concerned scientists are economists who have taken up the challenge to apply economic insights and tools for the study of long term environment economy interactions and to give the concept of sustainable development economic hands and feet This book presents a pluralistic perspective on efforts problems and successes in this area This collection of papers was originally prepared for an international symposium titled Economic Modelling of Sustainable Development Between Theory and Practice which was hosted by the Vrije Universiteit in Amsterdam on December 20th 1996 The main motivation for this symposium was that the usefulness of the concept of sustainable development for theoretical and applied modelling is still being debated growth theorists resource economists ecological economists policy makers and many others are trying to deal with the concept in various and sometimes conflicting ways The aim of the symposium was to bring together different theoretical and implementational perspectives on modelling for sustainable development We hope that this volume will inform a wide audience about the perspectives and progress in this important area of research as well as stimulate further research notably on applied modelling and practical methods for the analysis of sustainable development at various spatial scales The papers have in due course been revised several times based on comments made by discussants referees and the editors

Modeling and Control of Economic Systems 2001 R. Neck, 2003-05-21 This volume contains papers presented at the IFAC symposium on Modeling and control of Economic Systems SME 2001 which was held at the university of Klagenfurt Austria The symposium brought together scientists and users to explore current theoretical developments of modeling techniques for economic systems It contains a section of plenary invited and contributed papers presented at the SME 2001 symposium The papers presented in this volume reflect advances both in methodology and in applications in the area of modeling and control of economic systems

Qualitative Theory of Dynamical Systems, Tools and Applications for Economic Modelling Gian Italo Bischi, Anastasiia Panchuk, Davide Radi, 2016-06-02 The book presents the lectures delivered during a short course held at Urbino University in summer 2015 on qualitative theory of dynamical systems included in the activities of the COST Action IS1104 The EU in the new economic complex geography models tools and policy evaluation It provides a basic introduction to dynamical systems and optimal control both in continuous and discrete time as well as some numerical methods and applications in economic modelling Economic and social systems are intrinsically dynamic characterized by interdependence nonlinearity and complexity and these features can only be approached using a qualitative analysis based on the study of invariant sets equilibrium points limit cycles and more complex

attractors together with the boundaries of their basins of attraction which requires a trade off between analytical geometrical and numerical methods Even though the early steps of the qualitative theory of dynamical systems have been in continuous time models in economic and social modelling discrete time is often used to describe event driven often decision driven evolving systems The book is written for Ph D and master s students post doctoral fellows and researchers in economics or sociology and it only assumes a basic knowledge of calculus However it also suggests some more advanced topics

Economic Theory for Environmentalists John Gowdy, 2020-02-10 *Economic Theory for Environmentalists* is a much needed and heralded new book that examines the implications of neoclassical economic theory and how it relates to the environment and environmental activity It addresses the ongoing conflict between market forces and environmental integrity and explains how neoclassical economic theory views the relationship between economic activity and the natural world Each chapter outlines the concepts of economic theory and the relevance of its environmental and policy implications It focuses on both micro and macro economics Policy tools such as price and income elasticities consumer surplus and methods for measuring the economic value of environmental resources are discussed A case study which examines a range of policy options is presented Examples are also given throughout the text to illustrate regional and international policy questions Presented in a simple and easy to understand manner this valuable book is suited for anyone dealing with environmental economic or policy issues

Developments of Control Theory for Economic Analysis Carlo Carraro, D. Sartore, 2012-12-06 Giovanni Castellani Rector of the University of Venice This book contains the Proceedings of the Conference on Economic Policy and Control Theory which was held at

the University of Venice Italy on 27 January 1 February 1985 The goal of the Conference was to survey the main developments of control theory in economics by emphasizing particularly new achievements in the analysis of dynamic economic models by control methods The development of control theory is strictly related to the development of science and technology in the last forty years Control theory was indeed applied mainly in engineering and only in the sixties economists started using control methods for analysing economic problems even if some preliminary economic applications of calculus of variations from which control theory was then developed date back to the twenties Applications of control theory in economics also had to solve new complicated problems like those encountered in optimal growth models or like the determination of the appropriate intertemporal social welfare function of the policy horizon and the relative final state of the system of the appropriate discount factor Furthermore the uncertainty characterizing economic models had to be taken into account thus giving rise to the development of stochastic control theory in economics System Theory Applications to

An Introduction to Cybernetic Synergy Mark

Rowbotham, 2021-05-24 Cybernetics is about having a goal and taking action to achieve that goal Knowing whether you have reached your goal or at least are getting closer to it requires feedback a concept that was made rigorous by cybernetics The subject of Cybernetic Synergy although emanating from a socio economic experiment of economic control by cybernetic means in Chile in the early 1970s has never been approached as an applied subject in its own right Indeed the subject of applied cybernetics has never been addressed as a separate issue although it has been shown that the overall subject of cybernetics applies to a wide range of disciplines from biology to business via mathematics and engineering Cybernetic synergy is the study of relationships and controls of and between corporate entities on an external basis and departments within corporate entities on an internal basis It concerns the decision making process and how decisions can be made based on feedback from any part of the organization being managed It therefore concerns the issue of input of raw material or information the output of the transformed information and materials and the rectification of any issue based on negative feedback related to the productive process It investigates not only the basic theory of the subject but also its applications in the commercial and business environment as well as touching on government and administrative issues where shortcomings have emerged owing to a lack of synergy and communication There are already several books available on the subject to cybernetics but they are all concerned with mathematical approaches along with very heavy technical texts most of which are completely alien to the layman or the simple practitioner Furthermore other than references to business or economic practice in some books there has never been a book published purely about the subject of applied cybernetics relating to business practices The book covers the subjects of management and economic cybernetics and how the theory of cybernetic control can be used to manage business and government functions whether small medium or large It looks at the history of cybernetics and how some pioneering cybernetic concepts were used in Chile in the early 1970s to manage the Chilean

economy It uses these same principles along with later cybernetic models to show how such concepts can be applied to the present day economy and business practices It examines present day business practices and shows how weaknesses in these systems can be addressed and eliminated by the application of cybernetic practices The aims of the book are to provide an insight into the subject of management and business cybernetics using the principle of cybernetic synergy to resolve intra corporate issues and create more efficient business practices based on simple command and control processes Essentially this book provides an in depth insight into the use of cybernetics in business and administration environments and would explain how cybernetics is a valuable tool in resolving corporate issues concerning efficiency and overall control It would give a detailed explanation of the various practices and functions involved in business operations and practices The Shaping of Socio-Economic Systems (RLE Social Theory) Thomas Baumgartner, Tom Burns, Philippe DeVille, 2014-08-07 Actor systems dynamics is an innovative multidisciplinary methodology for investigating and analyzing social struggles over economic resources and the related interplay between economic and socio political institutions and processes The authors sociologists and economists offer a systemic perspective on contemporary socio economic issues such as economic crisis unemployment inflation economic democracy and development in their analyses they identify several of the key factors that drive people to interact to initiate change and transformation as well as to resist such change Major underlying themes in the book are Conflict over the distribution of economic resources and economic policies and institutions the structural bases of economic inequality and conflict the shaping and reshaping of socio economic institutions and the contradictions conflicts and instabilities evoked by such developments the failure of orthodox economic theories including Keynesianism in the face of recurrent economic crises and instabilities the development and application of an open dynamic actor oriented systems theory grounded in the social sciences addressing complex socio economic phenomena in ways diverging substantially from conventional economics All in all the papers collected here deal on the one hand with social power conflict and struggle concerning economic resources and institutions and on the other hand the structural and other factors which drive powering initiatives conflict and social innovation and transformation The book is addressed to a broad spectrum of social and managerial scientists concerned with socio economic issues institutions and development
