Models Of Madness:

Models of Madness John Read, Loren R. Moshier, Richard P. Bentall, 2004 Models of Madness shows that hallucinations and delusions are understandable reactions to life events and circumstances rather than symptoms of a supposed genetic predisposition or biological disturbance. International contributors critique the medical model of madness, examine the dominance of the illness approach to understanding madness from historical and economic perspectives, document the role of drug companies, outline the alternative to drug-based solutions, identify the urgency and possibility of prevention of madness. Models of Madness promotes a more humane and effective response to treating severely distressed people that will prove essential reading for psychiatrists and clinical psychologists and of great interest to all those who work in the mental health service. This book forms part of the International Society for the Psychological Treatment of Psychoses series edited by Brian Martindale. **Models of Madness** Dr John Read, Professor Richard Bentall, Loren Moshier, John Read, Jacqui

Dillon, 2013-06-19 Are hallucinations and delusions really symptoms of an illness called schizophrenia? Are mental health problems really caused by chemical imbalances and genetic predispositions? Are psychiatric drugs as effective and safe as the drug companies claim? Is madness preventable? This second edition of Models of Madness challenges those who hold to simplistic pessimistic and often damaging theories and treatments of madness. In particular, it challenges beliefs that madness can be explained without reference to social causes and challenges the excessive preoccupation with chemical imbalances and genetic predispositions as causes of human misery, including the conditions that are given the name schizophrenia. This edition updates the now extensive body of research showing that hallucinations, delusions etc. are best understood as reactions to adverse life events and that psychological and social approaches to helping are more effective and far safer than psychiatric drugs and electroshock treatment. A new final chapter discusses why such a damaging ideology has come to dominate mental health and most importantly how to change that. Models of Madness is divided into three sections. Section One provides a history of madness, including examples of violence against the mentally ill, before critiquing the theories and treatments of contemporary biological psychiatry and documenting the corrupting influence of drug companies. Section Two summarises the research showing that hallucinations, delusions etc. are primarily caused by adverse life events, e.g. parental loss, bullying, abuse, and neglect in childhood, poverty etc. and can be understood using psychological models ranging from cognitive to psychodynamic. Section Three presents the evidence for a range of effective psychological and social approaches to treatment, from cognitive and family therapy to primary prevention. This book brings together thirty-seven contributors from ten countries and a wide range of scientific disciplines. It provides an evidence-based optimistic antidote to the pessimism of biological psychiatry. Models of Madness will be essential reading for all involved in mental health, including service users, family members, service managers, policy makers, nurses, clinical psychologists, psychiatrists, psychotherapists, counsellors, psychoanalysts, social workers, occupational therapists, art therapists. *Models of Madness, Models of Medicine*
