Modern Aquaculture Coastal Zon:

Modern Aquaculture in the Coastal Zone João Coimbra, 2001 The successful development of coastal aquaculture in the opening years of the new millennium will depend upon solution of a multiplicity of economic sociological engineering scientific and environmental issues The objective of this volume is to update the current status of research in aquaculture in the coastal zone and outline directions for the development of sustainable aquaculture using modern methodologies It also discusses the application of existing knowledge and the creation of new knowledge to ensure that aquaculture will develop at a sufficient pace to sustain and enhance the availability of high quality foods of aquatic origin in the human diet despite the global decline in the capture fishery

Tropical Deltas and Coastal Zones Chu T. Hoanh, Brian W. Szuster, 2010 Coastal deltas represent one of the most diverse biophysical regions in the tropical developing world These regions are also home to large human populations and are significant areas of agricultural production and industrialization Tropical deltas currently face a number of environmental pressures stemming from their intensive use and rapid development and new threats are emerging as a result of global climate change and expected sea level rise Focusing on the developing countries of Asia Africa and South America chapters explore the impact of development strategies and existing land and water management practices on delta environments New management techniques are also explored which address conflicts between rice based agriculture aquaculture fisheries and the emerging threat of climate change Illustrating the current key management challenges involved in protecting tropical deltaic systems in the face of environmental change this book will be an essential reference for students researchers and policy makers in agriculture environmental science and aquaculture

Transforming Coastal Zone for Sustainable Food and Income Security T.D. Lama, Dhiman Burman, Uttam Kumar Mandal, Sukanta Kumar Sarangi, H.S. Sen, 2022-08-09 Coastal areas are commonly defined as the interface or transition areas between land and sea including large inland lakes Overall about 50 70 % of the global population live within 100 km of the coastline covering only about 4 % of earth's land thereby drawing heavily on coastal and marine habitats for food building sites transportation recreational areas and waste disposal The people of these zones depend mainly on low productive agriculture due to several constraints such as prolonged water logging and drainage congestion in predominantly low lying areas with heavy soils during the wet season preponderance of saline and acid sulphate soils scarcity of good quality irrigation water particularly in the dry season seawater intrusion into adjoining lands and water pollution due to eutrophication and others affecting the aquatic habitats etc Carbon sequestration in coastal areas such as marshes lagoons etc has significant influence on soil quality and the carbon pool in soils as well as their impacts on the environment Over and above these the coastal areas are prone to disasters due to climate change leading to colossal loss of lives and properties in many areas Forestry and mangrove dynamics in particular because of their continuing diminishing nature are also subjects of interest affecting the ecology of coastal zones requiring appropriate attention The international symposium held in this context on Transforming Coastal

Zones for Sustainable Food and Income Security in virtual mode in March 2021 offered scope to present and discuss various thematic areas by eminent scientists from all over the world. The proceedings of selected papers presented reflect cross sectoral views of the areas highlighting wherever necessary a fusion of technologies with the ultimate target to suggest livelihood security and sustainable development for the sensitive coastal zones. The book intends to share the knowledge with researchers, academicians and various other stakeholders to address the complex problems of coastal regions, production constraints, social, economic, technical and environmental issues to draw out strategies for resilient agricultural technologies and improving livelihood security in coastal agro ecosystems.

Coastal Management Revisited Bernhard Glaeser, Marion Glaser, 2023-01-31. The book presents an overview and historic perspectives of a novel scientific field coming of age today: coastal and ocean management. It covers diverse and changing issues ranging from conflict resolution to governance and ethical, political imperatives, natural disasters and climate change culminating in coastal and ocean typologies, the basis for a future theory of coasts and oceans. Eighteen chapters written by two main authors in cooperation with international experts review 25 years of research. The authors address challenges to society related to global change issues that have been generated by human activity in both temperate Sweden, Germany and the United States and tropical regions Brazil, Indonesia. Ultimately, the book documents the maturation of a field and responds to changing societal needs and scientific outlooks. It gathers recent analyses along with important earlier research with a foreword by Biliana Cicin Sain and Richard Delaney, globally renowned as coastal and ocean experts in theory and practice. Its broad approach makes the book a must read for graduate and postgraduate students as well as coastal management and marine spatial planning practitioners and for researchers in the fields of geography, anthropology, history of science, human and social ecology and environmental and development studies.

Coastal Ecosystems of the Tropics - Adaptive Management Velmurugan Ayyam, Swarnam Palanivel, Sivaperuman Chandrakasan, 2019-10-11. The coastal areas of the tropics are rich in biodiversity, natural resources and place of intensive developmental activities as it provides livelihood to millions of people. At the same time, evidences suggest that several unique coastal ecosystems viz mangroves, wetlands, salt marshes, corals, estuaries, sand dunes and agro ecosystem are vulnerable to natural disasters and events associated with global climate change. In recent times, degradation of land, water and genetic erosion besides threat to native flora and fauna have been increasing due to unsustainable developmental activities. Therefore, a paradigm shift in deriving livelihood through conventional methods, developmental strategies, conservation practices are required for balanced and sustainable growth of the coastal areas. This publication strives to cover the status of different natural resources of the coastal region, various aspects of degradation process, production need and restorative methods besides new technological options and its socio economic implications with case examples. Special focus is given to bring out the scope and potential of mangrove based farming, integrated and organic farming and its value addition besides the role of coastal vegetations as bioshield in protecting these regions from sea

erosion cyclones and tsunami As the tropical coastal areas are vulnerable to climate change events this book also covers the recent weather pattern impacts of climate change and climate resilient technologies besides intuitional linkages and policy framework aimed at balancing development and environmental concerns
