Next Generation Design and Verification Methodologies for Distributed Embedded Control Systems S. Ramesh, P. Sampath, 2007-08-26 This volume brings out the proceedings of the workshop Next Generation Design and Verification Methodologies for Distributed Embedded Control Systems conducted by General Motors R D India Science Lab Bangalore. This workshop is the first of its kind to be organised by an automotive Original Equipment Manufacturer (OEM) to bring together the experts in the field of embedded systems development to present state of the art work and to discuss future strategies for addressing the increasing complexity of embedded control systems. The theme of the workshop is an important focus area for the current and future automotive systems. Embedded Control Systems are growing in complexity with the increased use of electronics and software in high integrity applications for automotive and aerospace domains. In these domains they provide for enhanced safety, automation and control. Such embedded control systems are distributed, fault tolerant, real time systems with hybrid discrete and continuous behaviour. Furthermore, many of the control functions such as by wire controls have stringent performance and high integrity requirements. The research community has been addressing these challenges and over the last few years several design methodologies and tools for developing distributed embedded control systems have emerged. In spite of these developments, embedded control applications remain a daunting task requiring a great degree of human skill, expertise, time and effort. It is imperative to invest significant R D effort in coming up with methods and tools for future embedded control applications.

Modeling and Simulation of Aerospace Vehicle Dynamics Peter H. Zipfel, 2000 A textbook for an advanced undergraduate course in which Zipfel, aerospace engineering U of Florida introduces the fundamentals of an approach to or step in design that has become a field in and of itself. The first part assumes an introductory course in dynamics and the second some specialized knowledge in subsystem technologies. Practicing engineers in the aerospace industry he suggests should be able to cover the material without a tutor. Rather than include a disk he has made supplementary material available on the Internet. Annotation copyrighted by Book News Inc, Portland, OR.

Air and Missile Defense Systems Engineering Warren J. Boord, John B. Hoffman, 2016-04-06 Air and Missile Defense Systems Engineering fills a need for those seeking insight into the design procedures of the air and missile defense system engineering process. Specifically aimed at policy planners, engineers, researchers and consultants, it presents a balanced approach to negating a target in both natural and electronic attack environments.
