Parallel Processing and Parallel Algorithms Seyed H Roosta,2012-12-06 Motivation It is now possible to build powerful single processor and multiprocessor systems and use them efficiently for data processing which has seen an explosive expansion in many areas of computer science and engineering One approach to meeting the performance requirements of the applications has been to utilize the most powerful single processor system that is available When such a system does not provide the performance requirements pipelined and parallel processing structures can be employed The concept of parallel processing is a departure from sequential processing In sequential computation one processor is in

involved and performs one operation at a time. On the other hand, in parallel computation, several processors cooperate to solve a problem which reduces computing time because several operations can be carried out simultaneously. Using several processors that work together on a given computation illustrates a new paradigm in computer problem solving which is completely different from sequential processing. From the practical point of view, this provides sufficient justification to investigate the concept of parallel processing and related issues such as parallel algorithms. Parallel processing involves utilizing several factors such as parallel architectures, parallel algorithms, parallel programming languages, and performance analysis which are strongly interrelated. In general, four steps are involved in performing a computational problem in parallel. The first step is to understand the nature of computations in the specific application domain. Ubiquitous Computing Eduard Babkin, 2011-02-10. The aim of this book is to give a treatment of the actively developed domain of Ubiquitous computing. Originally proposed by Mark D. Weiser, the concept of Ubiquitous computing enables a real-time global sensing, context-aware informational retrieval, multi-modal interaction with the user, and enhanced visualization capabilities. In effect, Ubiquitous computing environments give extremely new and futuristic abilities to look at and interact with our habitat at any time and from anywhere. In that domain, researchers are confronted with many foundational technological and engineering issues which were not known before. Detailed cross-disciplinary coverage of these issues is really needed today for further progress and widening of application range. This book collects twelve original works of researchers from eleven countries which are clustered into four sections: Foundations, Security and Privacy, Integration, and Middleware, Practical Applications.

Database and Expert Systems Applications A. Min Tjoa, Isidro Ramos, 2012-12-06. The Database and Expert Systems Application (DEXA) conferences are mainly oriented to establish a state-of-the-art forum on Database and Expert System applications. But Practice without Theory has no sense, as Leonardo said five centuries ago. In this Conference, we try a compromise between these two complementary aspects. A total of 5 sessions are application-oriented, ranging from classical applications to more unusual ones in Software Engineering. Recent research aspects in Databases such as activity deductivity and/or Object Orientation are also present in DEXA 92, as well as the implication of the new data models such as OO Model, Deductive Model, etc., included in the Modelling sessions. Other areas of interest such as Hyper Text and Multimedia application together with the classical field of Information Retrieval are also considered. Finally, Implementation Aspects are reflected in very concrete fields. A total of nearly 200 papers submitted from all over the world were sent to DEXA 92. Only 90 could be accepted. A Poster session has also been established. DEXA 90 was held in Vienna, Austria; DEXA 91 in Berlin, Germany; and DEXA 92 will take place in Valencia, Spain, where we are celebrating the discovery of the New World just five centuries ago in Leonardo's age. Both the quality of the Conference and the compromise between Practice and Theory are due to the credit of all the DEXA 92 authors. Programming Many-Core Chips András Vajda, 2011-06-10. This book presents new concepts, techniques, and promising programming models for designing software for chips with many hundreds to thousands

processor cores Given the scale of parallelism inherent to these chips software designers face new challenges in terms of operating systems middleware and applications This will serve as an invaluable single source reference to the state of the art in programming many core chips Coverage includes many core architectures operating systems middleware and programming models **Official (ISC)2 Guide to the ISSAP CBK** (ISC) Corporate,2010-10-25 Candidates for the CISSP ISSAP professional certification need to not only demonstrate a thorough understanding of the six domains of the ISSAP CBK but also the ability to apply this in depth knowledge to develop a detailed security architecture that meets all requirements Supplying an authoritative review of the key concepts and requirements o *PC Mag* ,2001-11-27 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology
