The Role of Organic Matter in Modern Agriculture Y. Chen, Y. Avnimelech, 2012-12-06 The use of organic residues as a means of maintaining and increasing soil fertility is of long standing This tradition has been somewhat neglected since the introduction of mineral fertilizers at low cost More and more farmers and scientists are now showing renewed interest in the proper and effective use of organic residues composts and other recycled organic additives The role and function of organic amendments in modern agricultural systems have become topics of major interest in the scientific and agricultural communities Research work on residue disposal has provided new concepts on the interaction between organic components and soils as well as new handling technologies e.g. pelletizing of organic residues The trend to conserve energy has led scientists to study the minimal tillage system to find ways of replacing conventional inorganic fertilizers with natural organic products or microbial preparations and to develop new composting methods The drive to achieve higher yields in commercial greenhouse farming has led to a search for optimum substrates as growth media and for improved management techniques This has led to the introduction of organic substitutes for peat notably those originating from agricultural wastes Another important aspect is the current interest in organic farming where use of synthetic chemicals is avoided or prohibited An increasing percentage of the population in highly developed countries is willing to pay premium prices for food produced on soils where inorganic fertilizers and other agricultural chemicals have not been used

Tel-Or, Y. Hadar, Y. Chen, 2012-12-06 This volume comprises the proceedings of the First International Rehovot Conference on Modern Agriculture and the Environment held at the Rehovot Campus of the Faculty of Agriculture the Hebrew University of Jerusalem Israel 26 October 1994 The conference first in a series intended to be convened in Rehovot at 45 year intervals to address various aspects of the interaction of agriculture and the environment was initiated organised and carried out under the auspices of the Faculty of Agriculture the leading academic institution in agricultural and environmental studies in Israel It featured four keynote addresses 39 invited lectures 40 submitted papers and 62 posters Of these 51 articles written by 122 contributing authors from 14 countries were selected by the editors to be presented in this book All through the twentieth century and especially ever since the advent of the Green Revolution modern agriculture has been striving to feed and clothe the ever increasing multitudes of the human species through improved technology relying heavily on tremendous inputs of fertilisers pesticides and various other agrochemicals Undoubtedly this has been a great blessing to mankind and enormous strides have indeed been made in the never ending struggle against starvation but these have been achieved at a very steep price of increased environmental deterioration In fact modern agriculture has become one of the major factors contributing to the degradation of the world s fragile biosphere **Beneficial Co-Utilization of Agricultural, Municipal and Industrial by-Products** Sally L. Brown, J. Scott Angle, Lee W. Jacobs, 2012-12-06 Co utilization or blending of residuals offers a unique opportunity to develop products with particular characteristics that are able to target specific customer needs The very notion of deliberately blending by products suggests that the recycling and beneficial reuse industries are taking a quantitative step forward towards developing products rather than simply reusing residuals At the same time that this step provides unique opportunities it also presents unique challenges The science associated with the beneficial use of one product may not apply when that product is mixed with another residual Blending of materials may alter the chemistry of the components of the mixture This may offer additional benefits as in the case of disease suppression in composts or present unexpected problems as the use of lime stabilized biosolids has done in Maryland This book consists of the proceedings of the Beltsville Symposium The organizers of the Symposium attempted to structure a meeting that would outline both the

potential benefits of co utilization as well as concerns The editors have divided the proceedings into sections that describe the practical basis for co utilization of residuals as well as the potential benefits Specific considerations are described Finally case studies include descriptions of successful operations and data that detail results of research involving co utilization materials Blending of materials for specific objectives needs to be the focus of any successful co utilization effort The scientific implications of the mix need to be determined before a product can be used properly
