**Liquid Phase Sintering** R.M. German, 2013-12-14 In the past few years there has been rapid growth in the activities involving particulate materials because of recognized advantages in manufacturing This growth is attributed to several factors i an increased

concern over energy utilization ii a desire to better control microstructure in engineering materials iii the need for improved material economy iv societal and economic pressures for higher productivity and quality v requirements for unique property combinations for high performance applications and vi a desire for net shape forming Accordingly liquid phase sintering has received increased attention as part of the growth in particulate materials processing As a consequence the commercial applications for liquid phase sintering are expanding rapidly This active and expanding interest is not well served by available texts For this reason I felt it was appropriate to write this book on liquid phase sintering The technology of liquid phase sintering is quite old and has been in use in the ceramics industry for many centuries However the general perception among materials and manufacturing engineers is that liquid phase sintering is still a novel technique I believe the diverse technological applications outlined in this book will dispel such impressions Liquid phase sintering has great value in fabricating several unique materials to near net shapes and will continue to expand in applications as the fundamental attributes are better appreciated I am personally involved with several uses for liquid phase sintering

**Sintering and Catalysis** G. Kuczynski, 2012-12-06 The proceedings of the 4th International Conference on Sintering and Related Phenomena contained in this volume have been broadened in scope to include the phenomena of sintering and coalescence of catalytic materials dispersed upon refractory oxides For it has long been recognized within the circles of chemists and chemical engineers working in the field of catalysis that one of the chief causes of the decline in heterogeneous catalytic activity and/or selectivity is indeed sintering or perhaps using a better term

coalescence of the supported catalytic metal and compounds thereof Essentially catalytic deactivation by sintering is now well recognized as Ostwald ripening which of course is a phenomenon familiar to scientists grappling with the problem of sintering of powder compacts The 4th Conference at Notre Dame marks the first occasion at which scientists and engineers of each discipline were assembled in the same room to exchange views on these phenomena of mutual concern In the wake of the Conference at Notre Dame all parties acknowledged the synergistic benefit which issued from this exchange both at the formal and informal level All were persuaded that signal benefits will be realized by a continuation of this collaboration in the form of future sintering conferences in which both powder metallurgists and catalytic scientists and engineers would participate

**Sintering'85** Hayne Palmour, 2012-12-06 This volume contains the edited Proceedings of the Sixth World Round Table Conference on Sintering held in Herceg Novi Yugoslavia on September 2-6 1985 It was organized by the International Institute for the Science of Sintering IISS headquartered in Beograd Every fourth year since 1969 the Institute has organized such a Round Table Conference on Sintering each has taken place at some selected location within Yugoslavia A separate series of IISS Summer Schools have also been held at four year intervals but they have been offset by about two years so they occur between the main Conferences As a rule the Summer Schools have been devoted to more specific topics and they also take place in different countries The aim of these Conferences and their related Summer Schools has been to bring together scientists from all over the world who work in various fields of science and technology concerned with sintering and sintered materials A total of six IISS Conferences have been held over the period 1969-1985 and they have been supplemented by the three Summer Schools held in Yugoslavia Poland and India in 1975 1979 and 1983 respectively This most recent five day Conference addressed the fundamental scientific background as well as the technological state of the art in sintering and sintered materials It encompassed many of the high technology sintered materials needed for a wide variety of research and industrial applications

**Sintering Fundamentals** G.S. Upadhyaya, 2009-06-11 Volume is indexed by Thomson Reuters BCI WoS This book comprises state of the art reviews written by acknowledged experts who are active in sintering science It includes seven invited reviews by authors hailing from five countries J M Chaix France discusses quantitative aspects of the microstructures and modeling of sintering with the technical aspects of image analysis including that of nanostructured materials adding extra value Z S Nikolic Serbia provides a theoretical review of the simulation of liquid phase sintering particularly under microgravity conditions and extensively and critically reviews the results reported in the sintering literature A L Lisovsky Ukraine opens up the vista of deconsolidation of polycrystalline skeletons in sintered composite materials and deals with systems having more than one refractory solid phase and with nanodispersed composite materials G S Upadhyaya India reviews the Samsonov model for the electronic mechanism of sintering and its relevance pointing out that although the model is a qualitative one it has great utility as a predictive tool and that various case studies drawn from real multi phase material systems are a testimony to the value of Samsonov's model
