Bastida, 1984-12-28 This 1984 book aims to make the general theory of field extensions accessible to any reader with a modest background in groups rings and vector spaces Galois theory is regarded amongst the central and most beautiful parts of algebra and its creation marked the culmination of generations of investigation *Classical Galois Theory with Examples* Lisl Gaal, 1998 Galois theory is one of the most beautiful subjects in mathematics but it is hard to appreciate this fact fully without seeing specific examples Numerous examples are therefore included throughout the text in the hope that they will lead to a deeper understanding and genuine appreciation of the more abstract and advanced literature on Galois theory This book is intended for beginning graduate students who already have some background in algebra including some elementary theory of groups rings and fields The expositions and proofs are intended to present Galois theory in as simple a manner as possible sometimes at the expense of brevity The book is for students and intends to make them take an active part in mathematics rather than merely read nod their heads at appropriate places skip the exercises and continue on to the next section Algebra with Galois Theory Emil Artin, 2007 The present text was first published in 1947 by the Courant Institute of Mathematical Sciences of New York University Published under the title *Modern Higher Algebra Galois Theory* it was based on lectures by Emil Artin and written by Albert A Blank This volume became one of the most popular in the series of lecture notes published by Courant Many instructors used the book as a textbook and it was popular among students as a supplementary text as well as a primary textbook Because of its popularity Courant has republished the volume under the new title *Algebra with Galois Theory* Lectures on Modern Higher Algebra Emil Artin, 1948
