Oil in the Sea National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Steering Committee for the Petroleum in the Marine Environment Update, 1985-01-01 This comprehensive volume follows up and expands on an earlier National Academy of Sciences book It is the result of an intensive multidisciplinary effort to assess the problems relating to petroleum derived hydrocarbons in the marine environment Specifically it examines the inputs analytical methods fates and effects of petroleum in the marine environment The section on effects has been expanded significantly reflecting the extensive scientific effort put forth in determining the effects of petroleum on marine organisms Other topics discussed include petroleum contamination in specific geographical areas the potential hazards of this contamination to human health the impact of oil related activities in the northern Gulf of Mexico and the potential impact of petroleum on fisheries

Oil in the Sea III National Research Council, Transportation Research Board, Division on Earth and Life Studies, Marine Board, Ocean Studies Board, Committee on Oil in the Sea: Inputs, Fates, and Effects, 2003-03-14 Since the early 1970s experts have recognized that petroleum pollutants were being discharged in marine waters worldwide from oil spills vessel operations and land based sources Public attention to oil spills has forced improvements Still a considerable amount of oil is discharged yearly into sensitive coastal environments Oil in the Sea provides the best available estimate of oil pollutant discharge into marine waters including an evaluation of the methods for assessing petroleum load and a discussion about the concerns these loads represent Featuring close up looks at the Exxon Valdez spill and other notable events the book identifies important research questions and makes recommendations for better analysis of and more effective measures against pollutant discharge The book discusses Input where the discharges come from including the role of two stroke engines used on recreational craft Behavior or fate how oil is affected by processes such as evaporation as it moves through the marine environment Effects what we know about the effects of petroleum hydrocarbons on marine organisms and ecosystems Providing a needed update on a problem of international importance this book will be of interest to energy policy makers industry officials and managers engineers and researchers and advocates for the marine environment

Oil in the Sea IV National Academies of Sciences Engineering and Medicine, Division on Earth and Life Studies, Ocean Studies Board, Committee on Oil in the Sea IV, 2023-06-28 Oil and natural gas represent more than 50 percent of the worldwide energy supply with high energy demand driven by population growth and improving standards of living Despite significant progress in reducing the amount of oil in the sea from consumption exploration transportation and production risks remain This report the fourth in a series documents the current state of knowledge on inputs fates and effects of oil in the sea reflecting almost 20 additional years of research including long term effects from spills such as the Exxon Valdez and a decade long boom in oil spill science research following the Deepwater Horizon oil spill The report finds that land based sources of oil are the biggest input of oil to the sea far outweighing other sources and it also notes that the effects of chronic inputs on the marine environment such as land based runoff are very different than that from an acute input such as a spill Steps to prevent chronic land based oil inputs include reducing gasoline vehicle usage improving fuel efficiency increasing usage of electric vehicles replacing older vehicles The report identifies research gaps and provides specific recommendations aimed at preventing future accidental spills and ensuring oil spill responders are equipped with the best response tools and information to limit oil's impact on the marine environment Oil in the Sea James C. Fate and Effects of Oil in Marine Ecosystems J. Kuiper, W.J. van den Brink, 2012-12-06 A Rorsch Member of the TNO Board of Management Like all living creatures man has from the very outset influenced the environment Initially the traces of human activity were hardly noticeable and so were their effects on the equilibrium of the ecosystem as such However as soon as man learned how to use tools he was able to influence his surroundings more drastically and to proliferate more rapidly As a matter of fact that is the time when things went wrong because a process was started off which was to continue with ever increasing speed and on an ever increasing scale The present condition of nature as a result of the activities of mankind is generally known Whether it is an accident with a nuclear plant or the vanishing of tropical rain forests acid deposition or the pollution of soil water and air environmental disasters almost seem to be the order of the day It is striking that with all these more or less arbitrary examples the provision of energy plays a role In this respect one can add an even more important energy carrier to the list namely crude oil The Chemistry of Oil and Petroleum Products Merv Fingas, 2022-06-06 This book is devoted to the chemistry of oil and petroleum products and covers the broad range of topics from heavy fuel oils crude oils and diluted bitumen to today's research on asphaltenes Recent methods are summarized and the large new groups of chemicals found in oils are identified as well as described The work points the way for a more complete understanding of the composition of petroleum Highlights include An update on oil fingerprinting New data using Fourier transform mass spectrometry forensic

tools for naphthenic acid fraction compounds in oil sand environmental samples Data on vanadium and nickel content changes in the resins of heavy oils characteristics of their structural and group composition and the content of heteroatomic N S O compounds Study of asphaltenes using direct molecular imaging employing atomic force microscopy AFM and scanning tunneling microscopy STM confirming early findings of the dominance of the island molecular structure An update on the Yen Mullins model of asphaltenes in reservoirs giving the requisite solution to the asphaltene particle size thus resolving the gravity term for thermodynamic modeling A modified polymer solution theory the Flory Huggins Zuo FHZ EoS is provided to model asphaltene gradients in reservoirs A suite of oils from the Tarim Basin Qaidam Basin Ordos Basin and Liaohe Basin China is characterized geochemically to clarify factors that can affect the concentrations and distributions of pyrrolic nitrogen compounds PNCs in crude oils An update on biomarkers in crude oils Updates on mass spectrometry techniques applicable to crude oils
