

Phenomenology...as a Methodology

- ...is focused on the subjective experience of individuals or groups.
- ...is personal. The world as experienced by the individual, not relationships between people.
- ...uses small, *purposive* samples of 3-10 participants that have experienced the phenomenon.
- ...attempts to describe accurately a phenomenon from the person's perspective.

Phenomenology And The Theory Of Science:

Phenomenology and Theory of Science Aron Gurwitsch, 1974 Essays on the relationship between perceptual experience and scientific thought an introduction to the phenomenology of science PHENOMENOLOGY AND THE THEORY OF SCIENCE Aron Gurwitsch, 1979 **Phenomenology and the theory of science** Aron Gurwitsch, 1974

Gurwitsch's Relevancy for Cognitive Science Lester Embree, 2007-09-28 When I heard the rumor that the findings about the central nervous system obtained with new technology such as Magnetic Resonance Imaging MRI and Positron Emission Tomography PET were too subtle to correlate with the crude results of many decades of behavioristic psychology and that some psychologists were now turning to descriptions of subjective phenomena in William James Edmund Husserl and Maurice Merleau Ponty and even in Buddhism I asked myself Why not Aron Gurwitsch as well After all my teacher regularly reflected on the types basic concepts and methods of psychology worked with Adh mar Gelb and Kurt Goldstein in the institute investigating brain injured veterans at Frankfurt in the 1920s conspicuously employed Gestalt theory to revise central Husserlian doctrines and taught Merleau Ponty a thing or two That the last book from his Nachlass had recently been published and that I had recently written an essay on his theory of 1 psychology no doubt helped crystallize this project for me What is cognitive science At one point in assembling this volume I polled the participants asking whether they preferred the cognitive sciences or cognitive science Most who answered preferred the latter expression There is still some vagueness here for me but I do suspect that cognitive science is 2 another example of what I call a multidiscipline A multidiscipline includes participants who confront a set of issues that is best approached under more than one disciplinary perspective

On Logic and the Theory of Science Jean Cavaillès, 2021-04-27 A new translation of the final work of French philosopher Jean Cavaillès In this short dense essay Jean Cavaillès evaluates philosophical efforts to determine the origin logical or ontological of scientific thought arguing that rather than seeking to found science in original intentional acts a priori meanings or foundational logical relations any adequate theory must involve a history of the concept Cavaillès insists on a historical epistemology that is conceptual rather than phenomenological and a logic that is dialectical rather than transcendental His famous call cited by Foucault to abandon a philosophy of consciousness for a philosophy of the concept was crucial in displacing the focus of philosophical enquiry from aprioristic foundations toward structural historical shifts in the conceptual fabric This new translation of Cavaillès's final work written in 1942 during his imprisonment for Resistance activities presents an opportunity to reencounter an original and lucid thinker Cavaillès's subtle adjudication between positivistic claims that science has no need of philosophy and philosophers' obstinate disregard for actual scientific events speaks to a dilemma that remains pertinent for us today His affirmation of the authority of scientific thinking combined with his commitment to conceptual creation yields a radical defense of the freedom of thought and the possibility of the new

Biographical Dictionary of Twentieth-Century Philosophers Stuart Brown, Diane Collinson, Robert Wilkinson, 2012-09-10

This Biographical Dictionary provides detailed accounts of the lives works influence and reception of thinkers from all the major philosophical schools and traditions of the twentieth century This unique volume covers the lives and careers of thinkers from all areas of philosophy from analytic philosophy to Zen and from formal logic to aesthetics All the major figures of philosophy such as Nietzsche Wittgenstein and Russell are examined and analysed The scope of the work is not merely restricted to the major figures in western philosophy but also covers in depth a significant number of thinkers from the near and far east and from the non European Hispanic language communities The Biographical Dictionary also includes a number of general entries dealing with important schools of philosophy such as the Vienna Circle or currents of thought such as vitalism These allow the reader to set the individual biographies in the context of the philosophical history of the period With entries written by over 100 leading philosophy scholars the Biographical Dictionary is the most comprehensive survey of twentieth century thinkers to date

Goethe's Way of Science David Seamon, Arthur Zajonc, 1998-04-02 Examines Goethe's neglected but sizable body of scientific work considers the philosophical foundations of his approach and applies his method to the real world of nature

The Husserlian Foundations of Science Elisabeth Ströker, 2014-10-09 This book starts with a representation of Husserl's idea of phenomenology as a foundational theory of science The following essays elucidate the main features of the phenomenological method as worked out by Husserl in the course of the development of his philosophy starting from merely descriptive and going on to transcendental and constitutive phenomenology in order to get access to the foundations of knowledge in general and of scientific knowledge in particular Further essays deal with the Husserlian foundations of natural science and the relations between phenomenology and psychology as well as those between phenomenology and history This second revised and enlarged edition the first appeared in 1987 and was edited by Lee Hardy contains two further essays one deals with Husserl's never abandoned idea of phenomenology as a rigorous science and his further claim to restore phenomenological philosophy as First Philosophy and the other one on the problem of crisis of the Western culture Husserl was concerned with during several periods of his life demonstrates the actuality of his phenomenology even for philosophy of science in our times

History as a Science and the System of the Sciences Thomas M. Seeböhm, 2015-04-09 This volume goes beyond presently available phenomenological analyses based on the structures and constitution of the lifeworld It shows how the science of history is the mediator between the human and the natural sciences It demonstrates that the distinction between interpretation and explanation does not imply a strict separation of the natural and the human sciences Finally it shows that the natural sciences and technology are inseparable but that technology is one sidedly founded in pre scientific encounters with reality in the lifeworld In positivism the natural sciences are sciences because they offer causal explanations testable in experiments and the humanities are human sciences only if they use methods of the natural sciences For epistemologists following Dilthey the human sciences presuppose interpretation and the human and natural sciences must be separated There is phenomenology interested in psychology and the social sciences that distinguish the natural and the human sciences but little can be found about the historical human sciences This volume fills the gap by presenting analyses of the material foundations of the understanding of expressions of other persons and of primordial recollections and expectations founding explicit expectations and predictions in the lifeworld Next it shows on the basis of history as applying philological methods in interpretations of sources the role of a universal spatio temporal framework for reconstructions and causal explanations of what has really happened

The Husserlian Mind Hanne Jacobs, 2021-07-20 Edmund Husserl 1859 1938 is widely regarded as the principal founder of phenomenology one of the most important movements in twentieth century philosophy His work inspired subsequent figures such as Martin Heidegger his most renowned pupil as well as Jean Paul Sartre and Maurice Merleau Ponty all of whom engaged with and developed his insights in significant ways His work on fundamental problems such as intentionality consciousness and subjectivity continues to animate philosophical research and argument The Husserlian Mind is an outstanding reference source to the full range of Husserl s philosophy Forty chapters by a team of international contributors are divided into seven clear parts covering the following areas major works phenomenological method phenomenology of consciousness epistemology ethics and social and political philosophy philosophy of science metaphysics Contained in these sections are chapters on many of the key aspects of Husserl s thought including intentionality transcendental philosophy reduction perception time self and subjectivity personhood logic psychology ontology and idealism Offering an unparalleled guide to the enormous range of his thought The Husserlian Mind is essential reading for students and scholars of Husserl phenomenology and the history of twentieth century philosophy It will also be of
