Rings Categories Of Modules:

Rings and Categories of Modules Frank W. Anderson, Kent R. Fuller, 2012-12-06 This book is intended to provide a reasonably self contained account of a major portion of the general theory of rings and modules suitable as a text for introductory and more advanced graduate courses We assume the familiarity with rings usually acquired in standard undergraduate algebra courses Our general approach is categorical rather than arithmetical The continuing theme of the text is the study of the relationship between the one sided ideal structure that a ring may possess and the behavior of its categories of modules Following a brief outline of set theoretic and categorical foundations the text begins with the basic definitions and properties of rings modules and homomorphisms and ranges through comprehensive treatments of direct sums finiteness conditions the Wedderburn Artin Theorem the Jacobson radical the hom and tensor functions Morita equivalence and duality decomposition theory of injective and projective modules and semi perfect and perfect rings In this second edition we have included a chapter containing many of the classical results on artinian rings that have helped to form the foundation for much of the contemporary research on the representation theory of artinian rings and finite dimensional algebras Both to illustrate the text and to extend it we have included a substantial number of exercises covering a wide spectrum of difficulty There are of course many important areas of ring and module theory that the text does not touch upon

Lectures on Modules and Rings Tsit-Yuen Lam, 2012-12-06 Textbook writing must be one of the cruelest of self inflicted tortures Carl Faith Math Reviews 54 5281 So why didn't I heed the warning of a wise colleague especially one who is a great expert in the subject of modules and rings The answer is simple I did not learn about it until it was too late My writing project in ring theory started in 1983 after I taught a year long course in the subject at Berkeley My original plan was to write up my lectures and publish them as a graduate text in a couple of years My hopes of carrying out this plan on schedule were however quickly dashed as I began to realize how much material was at hand and how little time I had at my disposal As the years went by I added further material to my notes and used them to teach different versions of the course Eventually I came to the realization that writing a single volume would not fully accomplish my original goal of giving a comprehensive treatment of basic ring theory At the suggestion of Ulrike Schmickler Hirzebruch then Mathematics Editor of Springer Verlag I completed the first part of my project and published the write up in 1991 as *A First Course in Noncommutative Rings* GTM 131 hereafter referred to as *First Course* or simply *FC*

Lam,2009-12-08 The idea of writing this book came roughly at the time of publication of my graduate text Lectures on Modules and Rings Springer GTM Vol 189 1999 Since that time teaching obligations and intermittent intervention of other projects caused prolonged delays in the work on this volume Only a lucky break in my schedule in 2006 enabled me to put the finishing touches on the completion of this long overdue book This book is intended to serve a dual purpose First it is designed as a problem book for Lectures As such it contains the statements and full solutions of the many exercises that appeared in Lectures Second this book is also offered as a reference and repository for general information in the theory of modules and rings that may be hard to find in the standard textbooks in the field As a companion volume to Lectures this work covers the same math ematical material as its parent work namely the part of ring theory that makes substantial use of the notion of modules The two books thus share the same table of contents with the first half treating projective injective and flat modules homological and uniform dimensions and the second half dealing with noncommutative localizations and Goldie s theorems maximal rings of quotients Frobenius and quasi Frobenius rings concluding with Morita s theory of category equivalences and dualities [Cogroups and Co-rings in Categories of Associative Rings](#) George M. have strived and succeeded in creating a volume that is very user friendly *Algebras, Rings and Modules* Michiel Hazewinkel, Nadiya Gubarenko, V.V. Kirichenko, 2006-01-18 Associative rings and algebras are very interesting algebraic structures. In a strict sense the theory of algebras in particular noncommutative algebras originated from a single example namely the quaternions created by Sir William R. Hamilton in 1843. This was the first example of a noncommutative numbers system. During the next forty years mathematicians introduced other examples of noncommutative algebras began to bring some order into them and to single out certain types of algebras for special attention. Thus low dimensional algebras division algebras and commutative algebras were classified and characterized. The first complete results in the structure theory of associative algebras over the real and complex fields were obtained by T. Molien, E. Cartan and G. Frobenius. Modern ring theory began when J. H. Wedderburn proved his celebrated classification theorem for finite dimensional semisimple algebras over arbitrary fields. Twenty years later E. Artin proved a structure theorem for rings satisfying both the ascending and descending chain condition which generalized Wedderburn's structure theorem. The Wedderburn-Artin theorem has since become a cornerstone of noncommutative ring theory. The purpose of this book is to introduce the subject of the structure theory of associative rings. This book is addressed to a reader who wishes to learn this topic from the beginning to research level. We have tried to write a self-contained book which is intended to be a modern textbook on the structure theory of associative rings and related structures and will be accessible for independent study Introduction to Ring and Module Theory Alberto Facchini, 2025-03-29 This textbook is designed for a first course in ring theory, module theory and category theory. Written following several decades of teaching experience it stands out with its clear and engaging style featuring thorough explanations and attention to detail. Carefully selected exercises encourage active learning and problem solving. The textbook integrates elementary category theory with basic concepts and examples developed throughout the course. Although the primary focus is on rings and modules relevant notions for other algebraic structures such as groups and semigroups are also discussed. Thus this book aims at introducing students to noncommutative rings and modules within a broader algebraic context. Aimed at advanced undergraduates or master students in mathematics this textbook is suitable both for use in the classroom and self study. Whereas the first part of the book covers a basic course in ring and module theory the latter part includes optional deepening topics **Algebra: Rings, Modules and Categories [by] Carl Faith** Carl Faith, 1973

Rings and Categories of Modules Frank Wylie, Anderson, Kent R. Fuller, 1971 **Groups, Modules, and Model Theory - Surveys and Recent Developments** Manfred Droste, László Fuchs, Brendan Goldsmith, Lutz Strüngmann, 2017-06-02 This volume focuses on group theory and model theory with a particular emphasis on the interplay of the two areas. The survey papers provide an overview of the developments across group, module and model theory while the research papers present the most recent study in those same areas. With introductory sections that make the topics easily accessible to students the papers in this volume will appeal to beginning graduate students and experienced researchers.
