Riparian Landscapes:

Riparian Landscapes George Patrick Malanson, 1993-05-27 *Riparian Landscapes* examines the ecological systems of streamside and floodplain areas from the perspective of landscape ecology. The specific spatial pattern of riparian vegetation is seen as a result of and a control on the ecological geomorphological and hydrological processes that operate along rivers. Riparian structures are controlled by the spatial dynamics of channels, flooding, and soil moisture. These dynamics are part of integrated cascades of water, sediment, nutrients, and carbon to which animal and plant species respond in ways that illuminate community structure and competition. The role of the riparian zone in controlling species distribution and abundance is discussed. Intelligent management of these valuable ecological resources is highlighted. The potential for linking hydrological, geomorphological, and ecological simulation models is also explored. This book will be of interest to graduate and professional research workers in environmental science, ecology, and physical geography.

Vegetation of Australian Riverine Landscapes Samantha Capon, Cassandra James, Michael Reid, 2016-04-01 Vegetation communities in Australia's riverine landscapes are ecologically, economically, and culturally significant. They are also among the most threatened ecosystems on the continent and have been dramatically altered as a result of human activities and climate change. *Vegetation of Australian Riverine Landscapes* brings together for the first time the results of the substantial amount of research that has been conducted over the last few decades into the biology, ecology, and management of these important plant communities in Australia. The book is divided into four sections. The first section provides context with respect to the spatial and temporal dimensions of riverine landscapes in Australia. The second section examines key groups of riverine plants, while the third section provides an overview of riverine vegetation in five major regions of Australia, including patterns, significant threats, and management. The final section explores critical issues associated with the conservation and management of riverine plants and vegetation, including water management, salinity, fire, and restoration. *Vegetation of Australian Riverine Landscapes* highlights the incredible diversity and dynamic nature of riverine vegetation across Australia and will be an excellent reference for researchers, academics, and environmental consultants.

Decisions at the Water's Edge Lynne M. Westphal, 2006 *Ecosystem Function in Heterogeneous Landscapes* Gary M. Lovett, Clive G. Jones, Monica G. Turner, Kathleen C. Weathers, 2007-12-21 Among the most difficult problems in the life sciences is the challenge to understand the details of how ecosystems, watersheds, landscapes function. Yet the welfare of all life, not just the human species, depends upon the successful functioning of diverse and complicated ecosystems, each with various dimensions and compositions. Central to this working is the dominance and to a major extent, control of ecosystems by organisms, which means that these systems are constantly changing as the component organisms change and evolve. Such changes increase the challenge to understand the functioning of ecosystems and landscapes. Moreover, understanding the interactions among the myriad components of these systems is mind-boggling, as there are scores of biotic, probably many thousands of species.

when the microbial components are fully enumerated through genomics and countless abiotic ions molecules and compounds entities all simultaneously interacting and responding to diverse external factors to produce functional or dysfunctional environments for life This book focuses on the problems of connectedness and ecosystem functioning It is difficult enough to understand how an ecosystem functions when it is considered in isolation but all ecosystems are open and connected to everything else Clearly the inputs to any ecosystem are the outputs from others and vice versa and as such the fluxes represent major if not critical points for managing or changing the overall functioning of an ecosystem or landscape A major challenge is to find appropriate conceptual frameworks to address these complicated problems

Mountains and Plains Dennis H. Knight, George P. Jones, William A. Reiners, William H. Romme, 2014-01-01 Many changes some discouraging others hopeful have occurred in the Rocky Mountain region since the first edition of this widely acclaimed book was published Wildlife habitat has become more fragmented once abundant sage grouse are now scarce and forest fires occur more frequently At the same time wolves have been successfully reintroduced and new approaches to conservation have been adopted For this updated and expanded Second Edition the authors provide a highly readable synthesis of research undertaken in the past two decades and address two important questions How can ecosystems be used so that future generations benefit from them as we have How can we anticipate and adapt to climate changes while conserving biological diversity

Riparia Robert J. Naiman, Henri Decamps, Michael E. McClain, 2010-08-05 This book describes the underlying water

conditions and geologies that support viable riparia illustrates the ecological characteristics of riparia and discusses how riparia are used by human cultures as well as how riparia can be used to sustain environmental quality In recent years riparian management has been widely implemented as a means of improving fisheries water quality and habitat for endangered species This book provides the basic knowledge necessary to implement successful long term management and rehabilitation programs Treats riparian patterns processes in a holistic perspective from ecological components to societal activities Contains over 130 illustrations and photos that summarize this complex ecological system Synthesizes the information from more than 6 000 professional articles Sidebars provide a look into ongoing research that is at the frontiers of riparian ecology and management *General Technical Report NC. ,1981* **Where Land and Water Meet** Nancy Langston,2009-11-23 Water and land interrelate in surprising and ambiguous ways and riparian zones where land and water meet have effects far outside their boundaries Using the Malheur Basin in southeastern Oregon as a case study this intriguing and nuanced book explores the ways people have envisioned boundaries between water and land the ways they have altered these places and the often unintended results The Malheur Basin once home to the largest cattle empires in the world experienced unintended widespread environmental degradation in the late nineteenth and early twentieth centuries After establishment in 1908 of Malheur National Wildlife Refuge as a protected breeding ground for migratory birds and its expansion in the 1930s and 1940s the area experienced equally extreme intended modifications aimed at restoring riparian habitat Refuge managers ditched wetlands channelized rivers applied Agent Orange and rotenone to waterways killed beaver and cut down willows Where Land and Water Meet examines the reasoning behind and effects of these interventions gleaned lessons from their successes and failures Although remote and specific the Malheur Basin has myriad ecological and political connections to much larger places This detailed look at one tangled history of riparian restoration shows how through appreciation of the complexity of environmental and social influences on land use and through effective handling of conflict people can learn to practice a style of pragmatic adaptive resource management that avoids rigid adherence to single agendas and fosters improved relationships with the land *Plant Nutrition for Sustainable Food Production and Environment* Tadao Ando,Kounosuke Fujita,Tadahiko Mae,Hideaki Matsumoto,Satoshi Mori,Jiro Sekiya,2012-12-06 In the history of the International Plant Nutrition Colloquium from its first meeting in 1954 this meeting the 13th Colloquium is the first to be held in Asia and will be the last in the 20th century The 20th century has seen huge changes in the number and activities of mankind Our population has increased from around 1 7 billion to more than 5 8 billion and technological innovations have completely altered our way of living As a consequence of such rapid change we are facing many problems including changes in our environment of a global scale But while food shortage has been a serious concern to mankind throughout our history serious food shortages in the 20th century have been confined to limited times and areas As Lester Brown discusses in this volume farmers have increased food production heroically on demand We the plant nutritionists

should be proud of our support to the world's farmers which has helped them make their achievement possible. During the 20th century the science of plant nutrition also has achieved great progress as described by Jack Loneragan; it became established as a discipline firmly based in science, defined the chemical elements supporting plant growth and has contributed to improvements in plant production and environmental quality as readers will find in many contributions in this volume.

Encyclopedia of Biodiversity, 2013-02-05. The 7 volume *Encyclopedia of Biodiversity* Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study. It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it. Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity, ecological patterns and theories of biodiversity, and an assessment of contemporary patterns and trends in biodiversity. The science of biodiversity has become the science of our future. It is an interdisciplinary field spanning areas of both physical and life sciences. Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future. Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes. The editors of this edition are all well-respected, instantly recognizable academics operating at the top of their respective fields in biodiversity research; readers can be assured that they are reading material that has been meticulously checked and reviewed by experts. Approximately 1,800 figures and 350 tables complement the text, and more than 3,000 glossary entries explain key terms.

Applying Ecological Principles to Land Management Virginia H. Dale, Richard A.

Haeuber, 2001-07-20. This volume incorporates case studies that explore past and current land use decisions on both public and private lands and includes practical approaches and tools for land use decision making. The most important feature of the book is the linking of ecological theory and principle with applied land use decision making. The theoretical and empirical are joined through concrete case studies of actual land use decision making processes.

City, Country, Empire Jeffery M. Diefendorf, 2012-01-26. In the urgently expanding field of environmental history, two trends are emerging. Research has internationalized, crossing political and historical borders. And urban spaces are increasingly seen as part of, not apart from, the global environment. In this book Jeffery Diefendorf and Kurk Dorsey have gathered much of the important work pushing the field in new directions. Eleven essays by prominent and regionally diverse scholars address how human and natural forces collaborate in the creation of cities, the countryside, and empires. The *Cities* section features essays that examine pollution and its aftermath in Pittsburgh, the Ruhr Valley, Germany, and Los Angeles. These urban areas are far apart on the globe but closely linked in their histories of how human decision making has affected the environment. Changing rural and suburban spaces are the focus of *Countryside*. Elizabeth Blackmar follows the money in order to understand why the financing of suburban mall developments makes local resistance difficult. *Studies* of the fractious history of the creation of a

wildlife refuge in Oregon and the ongoing impact of hydraulic mining in the early California goldmining era emphasize the misuse of technology in rural spaces Such misuse is a central idea of *Empires In When Stalin Learned to Fish* Paul R Josephson tells the story of Soviet fishing technology designed to harness fish to the engine of socialism Other essays explore the failures of Western agricultural technology in Africa and the relationship between such technology and disease in European attempts to conquer the Caribbean In a stirring wide ranging consideration of the neo European colonies the United States Australia Canada and New Zealand Thomas R Dunlap observes the ongoing unsettled interaction of lands and dreams An afterword by Alfred W Crosby an eminent scholar of environmental history closes the book with a broad and insightful synthesis of the history and future of this critical field

Hydroecology and Ecohydrology Paul J. Wood, David M. Hannah, Jon P. Sadler, 2008-04-07 This state of the art research level text considers the growing volume of research at the interface of hydrology and ecology and focuses on the evolution of hydroecology ecohydrology process understanding hydroecological interactions dynamics and linkages methodological approaches detailed case studies future research needs The editors and contributors are internationally recognised experts in hydrology and ecology from institutions across North America South America Australia and Europe Chapters provide a broad geographical coverage and bridge the traditional subject divide between hydrology and ecology The book considers a range of organisms plants invertebrates and fish provides a long term perspective on contemporary and palaeo systems and emphasises wider research implications with respect to environmental and water resource management Hydroecology and Ecohydrology is an indispensable resource for academics and postgraduate researchers in departments of physical geography earth sciences environmental science environmental management civil engineering water resource management biology zoology botany and ecology It is also of interest to professionals working within environmental consultancies organizations and national agencies

Ecology for Nonecologists Frank R. Spellman, 2008 Written for anyone who works with chemicals or has a general interest in ecology this book examines the interrelationship of life forms in our environment and provides straightforward explanations about the complicated interactions among nature and humans Emphasizing basic concepts definitions and descriptions the author presents illustrative problems in terms of commonly used ecological parameters to provide readers with enough information to make technical and personal decisions about ecology Funneling the broad multidisciplinary field of ecology which incorporates aspects of biology chemistry physics geology meteorology agriculture forestry and more into a single stream the author provides those with backgrounds in only a handful or even none of these disciplines with an easy to read understanding of the functions and values of ecology and its interrelationships with other sciences including ecology's direct impact on our lives Organized into three parts this book examines the fundamentals of ecology the role of biodiversity and the practical side of ecology Readers will examine such topics as biogeochemical cycles ecological pyramids and the laws of population ecology They will also examine species terrestrial ecosystems and aquatic systems Each chapter ends with a
