Extinction and Radiation J. David Archibald, 2011-03-15 This study identifies the fall of dinosaurs as the factor that allowed mammals to evolve into the dominant tetrapod form It refutes the single cause impact theory for dinosaur extinction and demonstrates that multiple factors massive volcanic eruptions loss of shallow seas and extraterrestrial impact likely led to their demise While their avian relatives ultimately survived and thrived terrestrial dinosaurs did not Taking their place as the dominant land and sea tetrapods were mammals whose radiation was explosive following nonavian dinosaur extinction The author argues that because of dinosaurs Mesozoic mammals changed relatively slowly for 145 million years compared to the prodigious Cenozoic radiation that followed Finally out from under the shadow of the giant reptiles Cenozoic mammals evolved into the forms we recognize today in a mere ten million years after dinosaur extinction

is clear from reading their literature and attending their debates is that they do not represent mainstream Christianity and that they are as unorthodox in their theology as they are in their science In this lively and controversial book Chris McGowan a vertebrate paleontologist meets the creationists head on and systematically demolishes their arguments with genuine scientific evidence supporting evolutionary theory For the layperson who may be bewildered by the creationist's misinterpretation or even misrepresentation of the facts McGowan provides an easy to follow explanation of evolution that answers many common questions While attacking the creationist's point of view with no holds barred In the Beginning also offers a readable and well illustrated introduction to evolution science As a defense against the creationist threat to intellectual freedom and scientific truth this book will attract a wide variety of interested readers
