*Geomorphological Hazards and Disaster Prevention* Irasema Alcántara-Ayala, Andrew S. Goudie, 2010-03-04

Human activities have had a huge impact on the environment and landscape through industrialisation and land use change leading to climate change deforestation desertification land degradation and air and water pollution These impacts are strongly linked to the occurrence of geomorphological hazards such as floods landslides snow avalanches soil erosion and others Geomorphological work includes not only the understanding but the mapping and modelling of Earth's surface processes

many of which directly affect human societies In addition geomorphologists are becoming increasingly involved with the dimensions of societal problem solving through vulnerability analysis hazard and risk assessment and management The work of geomorphologists is therefore of prime importance for disaster prevention An international team of geomorphologists have contributed their expertise to this volume making this a scientifically rigorous work for a wide audience of geomorphologists and other Earth scientists including those involved in environmental science hazard and risk assessment management and policy

2016GUIDELINES FOR INVESTIGATING GEOLOGIC HAZARDS AND PREPARING ENGINEERING-GEOLOGY REPORTS, WITH A SUGGESTED APPROACH TO GEOLOGIC-HAZARD ORDINANCES IN UTAH Steve D. Bowman,William R. Lund,2016-09-21 The purpose of these guidelines for investigating geologic hazards and preparing engineering geology reports is to provide recommendations for appropriate minimum investigative techniques standards and report content to ensure adequate geologic site characterization and geologic hazard investigations to protect public safety and facilitate risk reduction Such investigations provide important information on site geologic conditions that may affect or be affected by development as well as the type and severity of geologic hazards at a site and recommend solutions to mitigate the effects and the cost of the hazards both at the time of construction and over the life of the development The accompanying suggested approach to geologic hazard ordinances and school site investigation guidelines are intended as an aid for land use planning and regulation by local Utah jurisdictions and school districts respectively Geologic hazards that are not accounted for in project planning and design often result in additional unforeseen construction and or future maintenance costs and possible injury or death

R. Navalgund,A. Senthil Kumar,Subrata Nandy,2018-10-18 Himalaya one of the global biodiversity hotspots is the abode of a variety of flora and fauna The Himalayan ecosystems have immense ecological socioeconomic and aesthetic significance as they provide a wide range of ecosystem services The northwest Himalaya NWH covering three states of India viz Uttarakhand Himachal Pradesh and Jammu and Kashmir starts from the foothills of Shivaliks in the south and extends to the greater Himalaya in the north This region is also the source of some of the major rivers of India With the increase in

population the NWH ecosystems have been under threat due to deforestation loss of biodiversity expansion of agriculture and settlement overexploitation of natural resources habitat loss and fragmentation poaching mining construction of roads and large dams and unplanned tourism The Himalaya being young and geotectonically active remains inherently unstable fragile and prone to natural disasters Climate change is also likely to impact the Himalayan cryosphere drastically Recognizing the importance of the Himalaya a National Mission for Sustaining the Himalayan Ecosystem one of the eight missions under the National Action Plan on Climate Change NAPCC of Govt of India to conserve biodiversity forest cover and other ecological values in the Himalayan region has been taken up Spaceborne remote sensing with its ability to provide synoptic and repetitive coverage has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena Indian Institute of Remote Sensing Dehradun has taken up a number of studies in the fields of geology water resources forestry agriculture urban settlement etc over the last decade The book summarises the work carried out in different disciplines illustrated with tables and figures and a host of relevant references It is hoped that the book serves as an excellent reference of immense value to the students researchers professors scientists professionals and decision makers working in the NWH region
