Assessment Tool is designed to provide illustrative information with respect to the subject matter covered and is recommended for use on audit engagements that are generally smaller in size and have less complex auditing and accounting issues. It is designed to help identify risks including significant risks and document the planned response to those risks. The Audit Risk Assessment Tool should be used as a supplement to a firm's existing planning module, whether in a firm-based or commercially provided methodology. The Audit Risk Assessment Tool is not a complete planning module. The AICPA recommends the Audit Risk Assessment Tool be completed by audit professionals with substantial accounting, auditing, and specific industry experience and knowledge. For a firm to be successful in improving audit quality and efficiencies, it is recommended that a 5 years experienced auditor completes the Audit Risk Assessment Tool or the engagement team member with the most knowledge of the industry and client often. Partner in small medium firms provides insight to whomever is completing the ARA Tool. The AICPA recommends this should not be delegated to lower level staff and just reviewed it should be completed under the direction of the experienced auditor. If you delegate to inexperienced auditor you will be at risk for less effectiveness and efficiencies because the tool is intended to be completed by an experienced auditor. The Audit Risk Assessment Tool does not establish standards or preferred practices and is not a substitute for the original authoritative auditing guidance. In applying the auditing guidance included in this Audit Risk Assessment Tool, the auditor should use professional judgment to assess the relevance and appropriateness of such guidance to the circumstances of the audit. This document has not been approved, disapproved, or otherwise acted on by a senior committee of the AICPA. It is provided with the understanding that the staff and publisher are not engaged in rendering legal, accounting, or other professional service. Cognitive Risk James Bone, Jessie H Lee, 2023-04-18 Cognitive Risk is a book about the least understood but most pervasive risk to mankind human decision making Cognitive risks are subconscious and unconscious influence factors on human decision making heuristics and biases To understand the scope of cognitive risk we look at case studies corporate and organizational failure and the science that explains why we systemically make errors in judgment and repeat the same errors The book takes a multidisciplinary and pedestrian stroll through behavioral science with a light touch using stories to explain why we consistently make cognitive errors that not only increase risks but also simultaneously fail to recognize these errors in ourselves or our organizations This science has deep roots in organizational behavior psychology human factors cognitive science and behavioral science all influenced by classic philosophers and enabled through advanced analytics and artificial intelligence The point of the book is simple Humans persist with bounded rationality but as the speed of information data money and life in general accelerates we will need the right tools to not only keep pace but to survive and thrive In light of all these factors that complicate risk the book offers a foundational solution A cognitive risk framework for enterprise risk management and cyber security There are five pillars in a cognitive risk framework with five levels of maturity yet there is no universally prescribed maturity level It is more a journey of different paths Each organization will pursue its own path but the goal is the same to minimize the errors that could have been avoided We explain why risks are hard to discuss and why we systematically ignore the aggregation of these risks hidden in collective decision making in an organization The cognitive risk framework is a framework designed to explore the two most complex risks organizations face uncertainty and decision making under uncertainty The first pillar is cognitive governance which is a structured approach for institutionalizing rational decision making across the enterprise Each pillar is complimentary and builds on the next in a succession of continuous learning There is no endpoint because the pillars evolve with technology Enterprise risk is a team effort in risk intelligence grounded in a framework for good decision making We close with a call to become designers of risk solutions enabled by the right technology and nurtured by collaboration We hope you enjoy the book with this context
