A Practical Guide presents an accessible treatment of the procedures and technologies involved in designing and building risk assessment processes and models. Areas examined include brokerage house portfolio management, legal decision making, construction, oil gas exploration, environmental assessments, engineering, marketing, government, manufacturing. The entire volume is presented as a narrative, keeping statistical jargon to a minimum and explaining all concepts, techniques, and processes in a straightforward manner. The author emphasizes that the technical aspects of a risk assessment and decision making effort are secondary to the cultural, organizational, and interpersonal facets of establishing a framework. Practical is the operative term throughout the text. *Risk Assessment and Decision Making in Business and Industry: A Practical Guide* enables readers who are not risk experts to effect an easy execution of the risk model building effort. *Structured Decision Making* Robin Gregory, Lee Failing, Michael Harstone, Graham Long, Tim McDaniels, Dan Ohlson, 2012-02-17. This book outlines the creative process of making environmental management decisions using the approach called Structured Decision Making. It is a short introductory guide to this popular form of decision making and is aimed at environmental managers and scientists. This is a distinctly pragmatic label given to ways for helping individuals and groups think through tough multidimensional choices characterized by uncertain science, diverse stakeholders, and difficult tradeoffs. This is the everyday reality of environmental management; yet many important decisions currently are made on an ad hoc basis that lacks a solid value-based foundation, ignores key information, and results in selection of an inferior alternative. Making progress in a way that is rigorous, inclusive, defensible, and transparent requires combining analytical methods drawn from the decision sciences and applied ecology with deliberative insights from cognitive psychology, facilitation, and negotiation. The authors review key methods and discuss case study examples based in their experiences in communities, boardrooms, and stakeholder meetings. The goal of this book is to lay out a compelling guide that will change how you think about making environmental decisions. Explores the relevance of systems thinking and behavioral science in construction risk management. Effective risk management is a vital component of all successful construction projects. Although quantitative tools for evaluating data and minimizing risk are readily available, construction managers commonly adopt a more innate, experience-based approach. In *Construction Risk Management Decision Making*, project manager and senior consultant Alex C. Arthur provides step-by-step advice on assessing and prioritizing risk using qualitative decision making systems in the construction industry. Incorporating key theories and concepts from systems thinking and behavioral science, this highly practical guide focuses on the behavior patterns of real people in the industry rather than complex quantitative techniques and data. Concise, easy to understand, chapters highlight the current practices of construction risk management while helping readers view risk and decision making from a broader perspective. Throughout the book, the author presents invaluable insights into the ways construction professionals think and

behave in the real world Addresses the actual risk management practices of construction professionals Applies human behavioral theories to the study of construction risk management decision making Illustrates the highly intuitive approaches prevalent in various construction projects Features real life case studies and practical examples throughout Construction Risk Management Decision Making is an excellent textbook for advanced students in project management engineering construction and surveying courses and a must have guide for practitioners of construction management surveying and architecture
