Rivers And Landscape:

Rivers in the Landscape Ellen Wohl, 2019-12-23 Rivers are the great shapers of terrestrial landscapes Very few points on Earth above sea level do not lie within a drainage basin Even points distant from the nearest channel are likely to be influenced by that channel Tectonic uplift raises rock thousands of meters above sea level Precipitation falling on the uplifted terrain concentrates into channels that carry sediment downward to the oceans and influence the steepness of adjacent hill slopes by governing the rate at which the landscape incises Rivers migrate laterally across lowlands creating a complex topography of terraces floodplain wetlands and channels Subtle differences in elevation grain size and soil moisture across this topography control the movement of ground water and the distribution of plants and animals Rivers in the Landscape Second Edition emphasizes general principles and conceptual models as well as concrete examples of each topic drawn from the extensive literature on river process and form The book is suitable for use as a course text or a general reference on rivers Aimed at advanced undergraduate students graduate students and professionals looking for a concise summary of physical aspects of rivers Rivers in the Landscape is designed to emphasize the connectivity between rivers and the greater landscape by explicitly considering the interactions between rivers and tectonics climate biota and human activities provide a concise summary of the current state of knowledge for physical process and form in rivers reflect the diversity of river environments from mountainous headwater channels to large lowland floodplain rivers and from the arctic to the tropics reflect the diverse methods that scientists use to characterize and understand river process and form including remote sensing field measurements physical experiments and numerical simulations reflect the increasing emphasis on quantification in fluvial geomorphology and the study of Earth surfaces in general provide both an introduction to the classic foundational papers on each topic and a guide to the latest particularly insightful and integrative references

Rivers in the Landscape Ellen Wohl, 2014-03-07 Rivers in the Landscape Science and Management offers a comprehensive and accessible overview of the current state of knowledge for river process and form taking a holistic approach to the subject with coverage of integrated river science and management in practice The processes and forms present in channelized surface flow rivers are systematically explored in this book to emphasize the connectivity between rivers and the greater landscape by explicitly considering the interactions between rivers and tectonics climate biota and human activities provide a concise summary of the current state of knowledge for physical process and form in rivers reflect the diversity of river environments from mountainous headwater channels to large lowland floodplain rivers and from the arctic to the tropics reflect the diverse methods that scientists use to characterize and understand river process and form including remote sensing field measurements physical experiments and numerical simulations reflect the increasing emphasis on quantification in fluvial geomorphology and the study of Earth surfaces in general provide both an introduction to the classic foundational papers on each topic and a guide to the latest particularly insightful and integrative references Aimed at

advanced undergraduate students graduate students and professionals looking for a concise summary of physical aspects of rivers this book emphasizes general principles and conceptual models as well as concrete examples of each topic drawn from the extensive literature on river process and form *Rivers and Landscape* Geoffrey E. Petts, 1985 There are two main themes to this book Firstly that river systems represent the integration and end product of all the processes operating within the drainage basin environment And secondly that rivers are sensitive to the most subtle changes particularly those induced by people In explaining the properties and dynamics of river systems the authors focus on new approaches ideas and interpretations but these are presented for the most part in a qualitative way Back cover **Disconnected Rivers** Ellen E. Wohl, 2004-01-01 Ellen Wohl offers a survey of the history present condition of river systems across the US After describing the biological chemical physical aspects of the functioning of rivers she discusses the changes as the result of development federal management examines rehabilitation projects *Rivers and landscape features of river action* M J. SANDS, 1967

Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems **Thinking Big** Joan O'Callaghan, 2012 Exploring relationships between landscape characteristics and rivers is an emerging field of study bolstered by the proliferation of satellite data advances in statistical analysis and increased emphasis on large scale

monitoring Climate patterns and landscape features such as road networks underlying geology and human developments determine the characteristics of the rivers flowing through them A multiagency team of scientists developed novel modeling methods to link these landscape features to instream habitat and to abundance of coho salmon in Oregon coastal streams This is the first comprehensive analysis of landscape scale data collected as part of the states Oregon Plan for Salmon and Watersheds The research team found that watershed characteristics and human activities far from the rivers edge influence the distribution and habitats of coho salmon Although large scale landscape characteristics can predict stream reaches that might support greater numbers of coho salmon smaller scale features and random chance also play a role in whether coho spawn in a particular stream and in a particular year The team developed new models that successfully predicted the distribution of instream habitat features Volume of instream wood and pool frequency were the features most influenced by human activities Studying these relationships can help guide large scale monitoring and management of aquatic resources

Siuslaw National Forest (N.F.), Five Rivers Landscape Management Project, 2001 *Water, Engineering, and Landscape* Denis E. Cosgrove, Geoffrey E. Petts, 1990 **Wild and Scenic Rivers of America** Tim Palmer, 1993 A new vision is sweeping through ecological science The dense web of dependencies that makes up an ecosystem has gained an added dimension the dimension of time Every field forest and park is full of living organisms adapted for relationships with creatures that are now extinct In a vivid narrative Connie Barlow shows how the idea of missing partners in nature evolved from isolated curious examples into an idea that is transforming how ecologists understand the entire flora and fauna of the Americas This fascinating book will enrich and deepen the experience of anyone who enjoys a stroll through the woods or even down an urban sidewalk But this knowledge has a dark side too Barlow s ghost stories teach us that the ripples of biodiversity loss around us now are just the leading edge of what may well become perilous cascades of extinction
