Robot Technology Teleoperations And Robotics Applications And Technology Series:

Teleoperation and Robotics Jean Vertut, 1985-06-30 It is a privilege to be asked to introduce this important work. Such a book has long been needed. Industrial manipulators and robots have caught the attention of the general public and become very fashionable in the last few years. The casual reader of current newspapers and magazines or the viewer of television and films might easily conclude that the development of mechanical hands, arms and legs or other mobility devices has progressed rapidly in only the last few years. Most people are unaware of the gradual, orderly succession of creative designs and painstaking refinements which have been produced over a greater number of years. That story is carefully described in this volume together with diagrams and photographs which document in detail this elegant phase in the history of machine design. This volume together with Volume 3A constitute the most complete and comprehensive work on manipulators and teleoperators. Jean Vertut and Philippe Coiffet are well known not only as authors but also as engineers who have produced some of the finest devices in the world. Of course for the complete history of manipulators and teleoperators one must look back to the artisans who crafted the delightful clock works, mechanical puppets and toys before and during the Renaissance.

The World Yearbook of Robotics Research and Development Sbornik Statei, 2013-04-17 How quickly the technological flavour of the month changes. At the beginning of the 1980s many saw robotics as being something of a panacea for those problems in the manufacturing industries which had been exacerbated by the world recession. Those working at the time in the field of robotics stressed that robots themselves were only part of the solution. Yet in many quarters the hype for the new technology apparently knew few bounds, resulting inexorably in many industries painfully discovering for themselves a new realism closely followed by disillusionment. In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible, highly sensory and integrated systems capable of handling a very

diverse product range through to comparatively inflexible high volume systems which can merely handle slightly different variations of the same basic product As a result of the one buzzword referring to such a variety of actual system types the disillusionment which started to become apparent during the early 1980 s acted as something of a double edged sword A given company might consider a particular robotics based technological solution to its production problems find that it was unsuitable and so renounce all robotics approaches as inappropriate Yet just because one position on that spectrum of technological solutions was unsuitable for the company should not have led them to assume that there was no other robotics solution that was appropriate
