Robot Components and Systems François Lhôte, Pierre André, Jean-Pierre Taillard, Jean-Marie Kauffmann, 1987-06-30

The contemporary industrial robot is the focal point of a wide variety of elements in modern technology It is a collection of parts some of which act as drives and some of which act as architectural materials that give the robot body strength This book is a thorough inventory of the technologies involved and the way in which they meet and work together in order to produce a functional robot arm The authors have striven to describe thoroughly the components that make up robot arms This gives both the student and the practitioner a complete view of the principles involved in such components and the differences between existing technologies However it is not only the student who benefits from this approach but also the potential robot user who at the moment may be faced with a bewildering choice of combinations of different types of components in the robots that are available to him For example it is difficult for a production manager to appreciate the differences between robots that use direct current motors stepping motors and pneumatic actuators The authors have succeeded in structuring the book so that the reader can weigh up the pros and cons of these different techniques at whatever level of depth he requires Certainly the book aims to provide as much depth as there is in these topics without assuming a detailed knowledge of specialized areas of engineering

Robotics Goes MOOC Bruno Siciliano, 2025-06-08 It is often read in the media that AI and Robotics are the primary cause of technology unemployment AI and machine learning techniques are expected to take over lower level tasks while humans can spend more time with higher level tasks In perspective it can be said that jobs requiring boring cognitive tasks or repeatable and dangerous physical tasks will be considerably shredded by automation thanks to the wide adoption of AI Robotics technology to replace humans while jobs requiring challenging cognitive tasks or unstructured physical tasks will be suitably re engineered with the progressive introduction of AI Robotics technology to assist humans From the discussion above it should be clear that in a world populated by humans and robots issues arise that go beyond engineering and technology due to the impact resulting from the use of robots in various application scenarios The anthropization of robots cannot ignore the resolution of those ethical legal sociological economic ELSE problems that have so far slowed their spread in our society The final book of the Robotics Goes MOOC project enlightens the impact of using

robotic technology in the main fields of application namely industrial robots as in Chapter 1 by Bischoff et al medical robotics as in Chapter 2 by Dario et al aerial robots as in Chapter 3 by Ollero et al orbital robotics as in Chapter 4 by Lampariello underwater robots in Chapter 5 by Antonelli and rescue robots as in Chapter 6 by Murphy The last part is devoted to the open dilemma of using and accepting robots in human co habited environments which is addressed in Chapter 7 on social robotics by Pandey and the very final chapter by Tamburrini on the important issues raised with roboethics *Robot Technology*, 1985

Robotic Industrialization Thomas Bock, Thomas Linner, 2015-08-10 In this volume concepts technologies and developments in the field of building component manufacturing based on concrete brick wood and steel as building materials and on large scale prefabrication delivering complex customized components and products are introduced and discussed Robotic industrialization refers to the transformation of parts and low level components into higher level components modules and finally building systems by highly mechanized automated or robot supported industrial settings in structured off site environments Components and modules are open building systems in modular building product structures that are delivered by suppliers to original equipment manufacturers such as for example large scale prefabrication companies or automated robotic on site factories In particular innovative large scale prefabrication companies have altered the building structures manufacturing processes and organizational structures significantly to be able to assemble in their factories high level components and modules from Tier 1 suppliers into customized buildings by heavily utilizing robotic technology in combination with automated logistics and production lines **BoogarLists | Directory of Robotics**
