Cotsaftis, F. Vernadat, 2013-10-22 Productivity enhancement is a major concern for all manufacturing enterprises Productivity enhancement can be achieved in many ways and many facets of its problems have been investigated over the last decades A number of methods tools and technologies have emerged to efficiently increase productivity and rationalize management of manufacturing enterprises International experts from both academia and industry share their experiences in this collection of articles contributing to the latest advances in the many facets of productivity enhancement in manufacturing enterprises Themes and visions are detailed on factories of the future new management approaches manufacturing system integration and manufacturing information systems These technical areas can be grouped into four major sections Factories of the future Techniques and tools for automated manufacturing Robotics and Industrial applications The papers illustrate a pattern of valuable and interesting approaches to the fascinating problem of designing a new generation of robots with high enough performance capabilities to be used in an industrial context CAD/CAM Robotics and Factories of the Future Birendra Prasad, S. N. Dwivedi, R. Mahajan, 2013-12-19 The complete shop floor automation a lights out factory where workers initially set up all machines turn

off the lights lock the door and the machine churns up the parts remains an unfulfilled dream Yet when we look at the enormity of the process of automation and integration even for the most simply conceived part factory we can recognize that automation has been applied and is being applied more so when it made sense from a cost benefit standpoint It is our nature to be dissatisfied with near term progress but when we realize how short a time the tools to do that automation have been available the progress is clearly noteworthy considering the multitudes of factors and the environment we have to deal with Most of the automation problems we confront in today's environment are multidisciplinary in nature They require not just the knowledge and experience in various distinct fields but good cooperation from different disciplined organizations to adequately comprehend and solve such problems In Volume III we have many examples that reflect the current state of the art techniques of robotics and plant automation The papers for Volume III have been arranged in a logical order of automation planning automated assembly robot programming and simulation control motion coordination communication and networking to factories of the future

Manufacturing Automation Management Roger W. Bolz, 2012-12-06 Automation has been employed for many years to provide a multitude of reasonably priced products for the American consumer However it has become evident that its real character as a manufacturing systems approach needs to be examined carefully for a better appreciation In this book the purpose is to examine automation technology in its broadest sense and develop not only an understanding but also present some of the engineering and organization know how by which manufacturing management can more effectively utilize automation to improve productivity and combat rising costs in the years ahead Fundamentally this book is addressed to manufacturing managers and the material presented in a manner that will provide the knowledge for assuring success in automating In addition it highlights the manufacturing research and long range planning that will be required for creating the new manufacturing technology so necessary for assuring success in future automation efforts One of the important facts emphasized in this text is that automation is not merely robotics or another kind or type of machinery To effect true productivity improvement requires a fresh look at the entire production process or facility as a completely integrated system With the developments of the past few years rapid advances in the technology and the tools of automation have brought this imperative goal within the reasonable grasp of manufacturing management in almost every segment of industry However to utilize this progress it is necessary to acquire a working understanding of all facets of automation

Robotics and Factories of the Future '87 R. Radharamanan, 2012-12-06 The papers presented at the Second International Conference on Robotics and Factories of the Future held in San Diego California USA during July 28 31 1987 are compiled in this volume Over two hundred participants attended the conference made technical presentations and discussed about various aspects of manufacturing robotics and factories of the future The number of papers published in this volume and the number of unpublished presentations at the conference indicates the evidence of growing interest in the areas of CAD CAM robotics and their role in future factories The conference consisted of five plenary sessions twenty three technical sessions workshops and exhibits from local industries and educational institutions I wish to acknowledge with many thanks the contributions of all the authors who presented their work at the conference and submitted the manuscripts for publication It is also my pleasure to acknowledge the role of keynote banquet and plenary sessions speakers whose contributions added greatly to the success of the conference My sincere thanks to all session chairmen I wish that the series of the International Conferences on Robotics and Factories of the Future which was initiated in 1984 in Charlotte North Carolina will have a major impact on the use of
