Autonomous Robot Vehicles Ingemar J. Cox, Gordon T. Wilfong, 2012-12-06 Autonomous robot vehicles are vehicles capable of intelligent motion and action without requiring either a guide or teleoperator control The recent surge of interest in this subject will grow even grow further as their potential applications increase Autonomous vehicles are currently being studied for use as reconnaissance exploratory vehicles for planetary exploration undersea land and air environments remote repair and maintenance material handling systems for offices and factories and even intelligent wheelchairs for the disabled This reference is the first to deal directly with the unique and fundamental problems and recent progress associated with autonomous vehicles The editors have assembled and combined significant material from a multitude of sources and in effect now conveniently provide a coherent organization to a previously scattered and ill defined field A Guide to Field Philosophy Evelyn Brister, Robert Frodeman, 2020-01-23 Philosophers increasingly engage in practical work with other disciplines and the world at large This volume draws together the lessons learned from this work including philosophers contributions to scientific research projects consultations on matters of policy and expertise provided to government agencies and non profits on how to effectively practice philosophy Its 22 case studies are organized into five sections I Collaboration and Communication II Policymaking and the Public Sphere III Fieldwork in the Academy IV Fieldwork in the Professions V Changing Philosophical Practice Together these essays provide a practical how to guide for doing philosophy in the field how to find problems that can benefit from philosophical contributions effectively collaborate with other professionals and community members make fieldwork a positive part of a philosophical career and anticipate and negotiate the sorts of unanticipated problems that crop up in direct public engagement Key features Gives specific advice on how to integrate philosophy with outside groups Offers examples from working with the public and private sectors community organizations and academic groups Provides lessons learned often summarized at the end of chapters for how to practice philosophy in the field Robot Ethics Patrick Lin, Keith Abney, George A. Bekey, 2014-01-10 Prominent experts from science and the humanities explore issues in robot ethics that range from sex to war Robots today serve in many roles from entertainer to educator to executioner As robotics technology advances ethical concerns become more pressing Should robots be programmed to follow a code of ethics if this is even possible Are there risks in forming emotional bonds with robots How might society and ethics change with robotics This volume is the first book to bring together prominent scholars and experts from both science and the humanities to explore these and other questions in this emerging field Starting with an overview of the issues and relevant ethical theories the topics flow naturally from the possibility of programming robot ethics to the ethical use of military robots in war to legal and policy questions including liability and privacy concerns The contributors then turn to human robot emotional relationships examining the ethical implications of robots as sexual partners caregivers and servants Finally they explore the possibility that robots whether biological computational hybrids or pure

machines should be given rights or moral consideration Ethics is often slow to catch up with technological developments This authoritative and accessible volume fills a gap in both scholarly literature and policy discussion offering an impressive collection of expert analyses of the most crucial topics in this increasingly important field **Handbook of Research on**

Using Educational Robotics to Facilitate Student Learning Papadakis, Stamatios, Kalogiannakis, Michail, 2020-12-05

Over the last few years increasing attention has been focused on the development of children's acquisition of 21st century skills and digital competences Consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns Technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking algorithmic thinking and project management Additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering The Handbook of Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action 1 computational identity which shows the importance of young people's development of scientific identity for future STEM growth and 2 digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways Covering subthemes including student competency and assessment programming education and teacher and mentor development this book is ideal for teachers instructional designers educational technology developers school administrators academicians researchers and students Guide to Dynamic

Simulations of Rigid Bodies and Particle Systems Murilo G. Coutinho, 2012-10-08 This book introduces the techniques needed to produce realistic simulations and animations of particle and rigid body systems The text focuses on both the theoretical and practical aspects of developing and implementing physically based dynamic simulation engines Each chapter examines numerous algorithms describing their design and analysis in an accessible manner without sacrificing depth of coverage or mathematical rigor Features examines the problem of computing an hierarchical representation of the geometric description of each simulated object as well as the simulated world discusses the use of discrete and continuous collision detection to handle thin or fast moving objects describes the computational techniques needed for determining all impulsive and contact forces between bodies with multiple simultaneous collisions and contacts presents techniques that can be used to dynamically simulate articulated rigid bodies concludes each chapter with exercises **Robotics Research** Masayuki

Inaba, Peter Corke, 2016-04-22 This volume presents a collection of papers presented at the 16th International Symposium of Robotic Research ISRR ISRR is the biennial meeting of the International Foundation of Robotic Research IFRR and its 16th edition took place in Singapore over the period 16th to 19th December 2013 The ISRR is the longest running series of robotics research meetings and dates back to the very earliest days of robotics as a research discipline This 16th ISRR meeting was held in the 30th anniversary year of the very first meeting which took place in Bretton Woods New Hampshire USA in August 1983 and represents thirty years at the forefront of ideas in robotics research As for the previous symposia ISRR 2013 followed up on the successful concept of a mixture of invited contributions and open submissions 16 of the contributions were invited contributions from outstanding researchers selected by the IFRR officers and the program committee and the other contributions were chosen among the open submissions after peer review This selection process resulted in a truly excellent technical program which featured some of the very best of robotic research These papers were presented in a single track interactive format which enables real conversations between speakers and the audience The symposium contributions contained in this volume report on a variety of new robotics research results covering a broad spectrum organized into traditional ISRR categories control design intelligence and learning manipulation perception and planning
