**Geomechanics** A. Asaoka, Toshihisa Adachi, F. Oka, 1997-10-23 Progressive failure has been a classical problem in the field of geotechnical engineering and has attracted considerable attention in connection with slope stability and foundation problems It is associated with strain localization or shear banding and is also related to damage in material structures As knowledge of the progressive failure mechanism increases it is now necessary to establish effective communications between researchers and engineers The International Symposium on Deformation and Progressive Failure in Geomechanics provided an opportunity for discussing recent advances in this area A total of 136 papers were contributed from 22 countries As well as these the symposium proceedings also contain 8 interim technical reports on the subject by the members of the Asian Technical Committee of the International Society for Soil Mechanics and Foundation Engineering and the Japanese Geotechnical Society National Committee on Progressive Failure in Geo structures Tree Rings and Natural Hazards Markus Stoffel, Michelle Bollschweiler, David R. Butler, Brian H. Luckman, 2010-07-15 Dendrogeomorphology Beginnings and Futures A Personal Reminiscence My early forays into dendrogeomorphology occurred long before I even knew what that word meant I was working as a young geoscientist in the 1960s and early 1970s on a problem with slope movements and deformed vegetation At the same time unknown to me Jouko Alestalo in Finland was doing something similar Both of us had

seen that trees which produced annual growth rings were reacting to geomorphic processes resulting in changes in their internal and external growth patterns Dendroclimatology was an already well established field but the reactions of trees to other environmental processes were far less well understood in the 1960s It was Alestalo 1971 who first used the term dendrogeomorphology In the early 1970s I could see that active slope movement processes were affecting the growth of trees in diverse ways at certain localities I wanted to learn more about those processes and try to extract a long term chronology of movement from the highly diverse ring patterns
