**Alicyclic Compounds** Malcolm Sainsbury, 2016-06-06 Rodd's Chemistry of Carbon Compounds Volume II Alicyclic Compounds focuses on alicyclic chemistry The book first ponders on acyclic and monocyclic monoterpenoids including artemisyl santoliny l chrysanthemyl and other irregular systems naturally occurring halogenated monoterpenoids cyclobutanes and tetramethylcyclohexanes The text discusses the carotenoid group of natural products Trends in carotenoid chemical research improved methodology optical isomerism including aliene isomerism and geometrical isomerism are described The book discusses cycloheptanes and cyclooctanes large alicyclic ring systems and polycarbonic compounds with separate ring systems and spiro compounds The text describes polycyclic compounds and polycarbocyclic bridged ring compounds and then discusses bicarbocyclic natural products The Wagner Meerwein rearrangement camphor and related compounds fenchone and related compounds and carane thujane and pinane groups are also considered The text is a valuable reference for readers interested in the study of carbon compounds

Terpenoids and Steroids K H Overton, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 90 years The Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual

Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

**Carbohydrates** Momcilo Miljkovic, 2009-09-18 All essential areas of basic synthetic carbohydrate chemistry are covered and appropriately described In addition this book explains the basic reaction mechanisms while taking into account modern concepts such as stereoelectronic principles

**Heteroatom Manipulation** E. Winterfeldt, 1992-09-08 In this volume those functional groups containing heteroatoms that have gained importance in organic synthesis are dealt with in detail The introduction of these various groups and their relevant transformations are described and the various aspects of chemoselectivity regioselectivity and stereoselectivity are discussed After a compilation of the synthetically most useful substitution processes there is a series of chapters on the various types of acylation reactions and in this context the different methods of acyl group activation are discussed As functional group protection is of very general importance for organic synthesis a corresponding chapter is included This is followed by a section on the preparation of carbonyl derivatives and the most important transformations and rearrangements of functional group derivatives At the end of the volume one finds chapters on all types of elimination reactions and related thermal reactions together with a survey on fragmentation processes in organic synthesis
