Cytokines in Severe Sepsis and Septic Shock H. Redl, 2013-03-11 t Heinz Red and Gunther Sch ag Ludwig Boltzmann Institute for Experimental and Clinical Traumatology Vienna Austria The word sepsis derives from the Greek meaning decay or rottenness Tradition ally this term has been used to describe the process of infection accompanied by the host s systemic inflammatory response Based on that understanding previous clin ical studies have been designed to include only patients with positive blood cultures 1 2 However the frequent occurrence of a septic response without the demon stration of microorganisms in the circulation has led to a new definition and under standing of sepsis mainly as the systemic response of the host to an often unde tectable microbiological or non microbiological process 3 The general consensus is that cytokines are central to the inflammatory response particularly in sepsis It is now known that not only Gram negative but also Gram positive viral and fungal infections initiate the complex cascades of cytokine release Probably the most important aspect of bacterial action is the release of toxic bacterial products In particular endotoxin from Gram negative bacteria see chap ter by Schade and super antigens see chapter by Neumann and Holzmann as well as pore forming toxins 4 from Gram positive bacteria induce cytokine formation The importance of this cytokine release is evident from both diagnostic and thera peutic mostly experimental studies and the action of cytokines may be the key to our understanding of the pathophysiology of the sepsis syndrome
