Membrane Fluidity in Biology Roland C. Aloia,Joan M. Boggs,2013-09-24 Membrane Fluidity in Biology Volume 3 Disease Processes focuses on the relationship of membrane lipid alterations and membrane fluidity to various pathological conditions providing unique phenomenological conceptualizations of disease states This book compiles comprehensive reviews on topics such as respiratory distress syndrome diabetes and receptor function muscular dystrophies atherosclerosis alcohol membrane effects and lymphocyte function and cancer This publication also evaluates the interplay between membrane lipid alterations and membrane fluidity and abnormal cellular function emphasizing how possible alterations in membrane lipids and cholesterol and consequent changes in membrane fluidity can influence normal cellular activity and lead to pathological cellular function This volume is intended for molecular and cellular biologists clinician scientists struggling with an understanding of the mechanisms of pathological processes and biophysicists seeking research problems in pathology to study

A Study of Enzymes, Volume II Stephen A. Kuby,2024-12-20 This comprehensive monograph consists of two parts Volume I entitled Enzyme Catalysis Kinetics and Substrate Binding and Volume II entitled Mechanism of Enzyme Action Volume I focuses on several aspects of enzyme catalytic behavior their steady state and transient state kinetics and the thermodynamic properties of substrate binding Packed with figures tables schemes and photographs this volume contains over 1 000 references including

references regarding enzymology s fascinating history This comprehensive book is of particular interest to enzymology students teachers and researchers Volume II presents selected cutting edge examples of techniques and approaches being pursued in biochemistry This up to date resource includes 11 chapters which illustrate important theoretical and practical aspects of enzyme mechanisms It also features selected examples in which today s most important techniques ideas and theories are used to elaborate on the intricate nature of enzyme action mechanisms This particular volume provides important information for both the novice and the seasoned investigator The Ecology of Biological Invasions ,1987

Selected Topics in Inorganic Chemistry - Part II Dr. A. AHMED RAZA & Dr. SEENU RAVI,2024-09-05 This book is for the postgraduate students of chemistry aspiring to crack competitive examinations such as CSIR NET GATE SLET SET and PhD entrance examinations Presently admission to PhD programs in premier institutions like IITs NITs CSIR laboratories central universities and state universities is based on either NET GATE certificate or PhD entrance examinations Further the minimum eligibility criteria laid by UGC for the direct recruitment of Assistant Professors in the higher educational institutions is a postgraduate degree with NET SLET SET certificate Thus the students are bound to pass these examinations to pursue a bright career either in research or in academic teaching The cut off for qualifying these exams is 40 to 50% However the qualifying percentage of the candidates appearing for these examinations is around 5% only Therefore an attempt has been made by authors to develop study material pertaining to the syllabus of these exams along with the solved problems from the previous year question papers which will guide the students to qualify easily **Research Awards Index**

Lee,2024-11-01 Written by established researchers this two volume publication provides timely comprehensive and insightful reviews on recent discoveries in the etiology of hypertension Structural changes of the blood vessels in hypertension in relation to connective tissue cerebral vessel structure and innervation smooth muscle cell hypertrophy and or hyperplasia and rarefaction of microvessels are discussed Also presented are the effects of antihypertensive therapy on vessel structure and function A unique feature is the inclusion of a chapter on pulmonary vascular changes in pulmonary hypertension which shows certain changes that are similar to systemic hypertension This book is of major interest to researchers involved in the study of hypertension and the biology of the blood vessels *Metal Ions in Bio-Imaging Techniques* Astrid Sigel,Eva Freisinger,Roland K.O.

Sigel,2021-03-08 Volume 22 entitled Metal Ions in Bio Imaging Techniques of the series Metal Ions in Life Sciences deals with metal ions as tools in imaging This dates back to the first half of the past century when barium sulfate was orally given to patients undergoing X ray examination The use of contrast agents has since developed into a large interdisciplinary field encompassing not only medicine but also chemistry material sciences physics biology engineering and computer sciences MILS 22 provides deep and current insights in 17 stimulating chapters on the new research frontiers of this fast growing

field on bio imaging and beyond For example adding bio sensing yields theranostic agents meaning diagnosis and therapy linked in the same molecule ions of Gd Mn Fe Co Ir ^{99m}Tc etc are involved Other important topics are e g metal complexes in paramagnetic Chemical Exchange Transfer paraCEST radiometals for Positron Emission Tomography PET imaging or paramagnetic metal ion probes for ¹⁹F magnetic resonance imaging MILS 22 is written by 57 internationally recognized experts from 12 countries that is from the US via Europe to China The impact of this vibrant research area is manifested by more than 2300 references and nearly 120 figures mostly in color and several informative tables To conclude Metal Ions in Bio Imaging Techniques is an essential resource for scientists working in the wide range from material sciences enzymology analytic organic and inorganic biochemistry all the way through to medicine including the clinic not forgetting that also excellent information for teaching is provided *Electromagnetic Fields in Biological Systems* James C. Lin, 2016-04-19 Spanning static fields to terahertz waves this volume explores the range of consequences electromagnetic fields have on the human body Topics discussed include essential interactions and field coupling phenomena electric field interactions in cells focusing on ultrashort pulsed high intensity fields dosimetry or coupling of ELF fields into biological systems and the historical developments and recent trends in numerical dosimetry It also discusses mobile communication devices and the dosimetry of RF radiation into the human body exposure and dosimetry associated with MRI and spectroscopy and available data on the interaction of terahertz radiation with biological tissues cells organelles and molecules Spinal Cord Injuries J. D. Alderson, 1990 Research Grants Index National Institutes of Health (U.S.). Division of Research Grants, 1975

Scientific and Technical Books and Serials in Print, 1984 *Metallothioneins and Related Chelators* Astrid Sigel, Helmut Sigel, Roland K. O. Sigel, 2009 Chapters 3 to 5 give an account of bacterial MTs MTs in yeast and fungi and MTs in plants Most astonishingly the MTs of bacteria and plants contain next to cysteine also histidine residues and thus metal ions are not only sulfur but also imidazole coordinated which gives rise to zinc finger like structures Remarkably yeast and fungal MTs are Cu I rather than Zn II or Cd II binding proteins Next Chapters 6 through 9 discuss the MTs of dipteran insects including the model organism *Drosophila melanogaster* earthworms and nematodes as well as echinoderms crustaceans molluscs and fish Actually aquatic animals both vertebrates and invertebrates have the potential to be used for monitoring metal contamination in aquatic ecosystems Interestingly in Chapter 9 the remarkable speculation is presented that under chronic natural exposure conditions the animals establish a trade off between the cost of detoxifying non essential metals and the cost of allowing some of these metals to spill over onto metal sensitive sites This contrasts with laboratory experiments involving aquatic animals where the toxicity of non essential metals normally exhibits a threshold response at low exposure concentrations the organisms can detoxify the incoming metal and thus tolerate the exposure whereas at concentrations above the threshold the detoxification mechanism is no longer able to protect the organism completely
