## **Role Of Immune Mechanisms In Cardiovascular Disease:**

The Role of Immune Mechanisms in Cardiovascular Disease Heinz-Peter Schultheiss, Peter Schwimbeck, 2012-12-06 An involvement of the immune system is suspected in various cardiovascular diseases Recent advances in the fields of molecular biology genetics cell biology and immunology have made it possible to identify several pathomechanisms However still more questions arise with regard to the pathophysiology diagnosis and treatment of immunologically mediated cardiovascular diseases In this book leading scientists and clinicians from different areas of cardiology present the state of the art knowledge on the involvement of the immune system in myocardial and vascular diseases In the field of myocarditis both the virological and the immunological findings are presented and the interactions between the virus and the immune system are discussed Since the cellular immune system and its mediators play an important role in the inflammation by bacteria that cause endocarditis and septic shock studies investigating the underlying pathomechanisms are described Another major topic in this volume is the involvement of the immune system in arteriosclerosis and coronary heart disease which represents an important problem in clinical cardiology The final chapter addresses the question of therapeutic options presenting new approaches for a specific and effective therapy based on the current knowledge of immunologically mediated cardiovascular diseases

Hongyun Wang,Junjie Xiao,Yunlong Huang,2022-11-23     HIV-Induced Damage of B Cells and Production of HIV Neutralizing Antibodies Francesca Chiodi,Gabriella Scarlatti,2018-03-27 Multiple dysfunctions take place in the B cell compartment during HIV 1 infection comprising depletion of resting memory B cells carrying serological memory to vaccines and previously met pathogens In addition population of B cells characterized by the expression of exhaustion markers are enlarged during HIV 1 infection Antibodies with the capacity to neutralize a broad range of HIV 1 isolates can be detected only in a minority of infected patients after a year or more from acute infection An open question is whether the inability of producing neutralizing HIV 1 antibodies is somehow linked to the B cell immunopathology observed in patients In this research topic we invited scientists to summarize the current state of knowledge on regulation and development of B cells and antibody responses during HIV 1 infection fifteen contributions were received comprising both reviews and original articles The articles are related to B cell dysfunctions identified in HIV 1 infected individuals production of different types of antibodies neutralizing versus non neutralizing and of different isotypes in vivo during HIV 1 infection and the biological factors which may impact on this process clinical potential and applications of anti HIV antibodies and how to achieve neutralizing antibody responses to HIV 1 epitopes upon vaccination The topic has gathered articles on front line research undertaken in the field of B cells and antibodies in HIV 1 infection It is our hope that the collection of articles presented in this book may be useful for new and experienced scholars in the field and add a piece to the complex puzzle of knowledge needed for the development of an HIV 1 vaccine     **Essentials of Pathophysiology** Carol Porth,2011 Porth

Tutuncu,2025-09-23 An adequate and balanced response to pathogenic factors is one of the conditions that determine the survival of an individual a population or even an entire species Clinical data collected during the COVID 19 pandemic showed that a patients resistance varied depending on their levels of well known endocrine system regulators e g vitamin D In addition the imbalance of hormonal milieu in women increases the prevalence rate for autoimmune diseases compared to men whilst exposure to endocrine disruptors negatively affects the development of the immune system in offspring leading to later health defects All of the above proves that understanding the linkage between the endocrine and immune system is necessary to propose new therapeutic strategies helping improve the lives of those with disease and illness It is known that restoring the endocrine system balance through ligand mediated modulation of GPCR signaling improves the functioning of both innate and adaptive immune systems Thus an excessive immune response demonstrated that acute or chronic inflammation can be controlled differently than through commonly used immunosuppressive drugs There is therefore much more to be discovered from learning the relationship between these two systems      **Nano-Biomaterials for the Delivery of Therapeutic and Biological Cues for Regenerative Medicine** Silvia Minardi,Hafiz M.
