Alexander Watt (F. R. S. A.), 1911 Library of Congress Subject Headings Library of Congress, 2009 **Agglomeration Processes** Wolfgang B. Pietsch, 2008-07-11. Agglomeration is integral to the processes of modification of powders, production of composites and creation of new materials which are required in pharmaceuticals, foods, chemicals, fertilizers and agrochemicals, minerals, ceramics, metallurgy and all material producing industries. The binding mechanisms and the particle behavior as well as the characteristics of the processes and the resulting agglomerates are the same whether they are occurring in the ultra clean pharmaceutical or food industries or in dirty minerals or waste processing plants. The book introduces the interdisciplinary approach to the development of new concepts and the solution of problems. It is a complete and up to date practical guide describing the various agglomeration phenomena and industrial techniques for size enlargement. In addition to introducing the properties of agglomerates and the characteristics of the different methods, descriptions of the machinery and discussions of specific equipment features are the main topics. The detailed evaluation of the subject is based on the authors' experience as student, researcher, teacher, developer, designer, vendor and user as well as expert and consultant in the field of agglomeration, its technologies and products and is complemented by the know how of colleagues who are active in specific areas and information from vendors. It is intended for everybody working in industries that process and handle particulate solids as it aims to help understand and control unwanted agglomeration as well as use, improve and develop methods for the beneficial size enlargement by agglomeration. **Handbook of Food Processing Equipment**
