Topics and Trends in Current Science Education Catherine Bruguière, Andrée Tiberghien, Pierre Clément, 2013-11-19. This book features 35 of the best papers from the 9th European Science Education Research Association Conference ESERA 2011 held in Lyon, France, September 5th-9th 2011. The ESERA international conference featured some 1,200 participants from Africa, Asia, Australia, Europe as well as North and South America, offering insight into the field at the end of the first decade of the 21st century. This book presents studies that represent the current orientations of research in science education and includes studies in different educational traditions from around the world. It is organized into six parts around the three poles: content, students, teachers and their interrelations of science education. After a general presentation of the volume, the first part, the second part concerns SSI (Socio-Scientific Issues) dealing with new types of content, the third, the teachers, the fourth, the students, the fifth, the relationships between teaching and learning and the sixth, the teaching resources and the curricula.

Preparing for Chemistry Teaching Festo Kayima, 2025-08-13. This textbook is a comprehensive chemistry didactics resource for chemistry teacher educators, chemistry teachers and trainees. It provides research-grounded and practical-based pedagogical experiences, examples and frameworks for chemistry teachers as well as a foundation for planning and implementing productive chemistry lessons. The book provides a conceptual and practical roadmap illuminating which didactic knowledge elements are relevant for becoming a chemistry teacher. The book starts off with a pedagogically laden, however, experience-based justification for the relevance of chemistry didactics and then progressively breaks down the different knowledge elements that form a complete set of the didactic knowledge and skill elements a teacher needs for teaching. Concrete examples are provided to allow the reader to operationalize the ideas and concepts presented in the book. The structure of the chapters enables the reader to engage progressively and actively with its contents and provided examples, allowing a deep understanding of the diverse links between the presented topics, forming a complete set of the didactic knowledge and skills relevant for successful chemistry teaching.

The Teaching of Science in Primary Schools Wynne Harlen OBE, Anne Qualter, 2017-08-04. *The Teaching of Science in Primary Schools* provides essential information for all concerned with primary school education about all aspects of teaching science. It pays particular attention to inquiry-based teaching and learning because of the more general educational benefits that follow from using this approach. These benefits are often expressed in terms of developing general scientific literacy and fostering the ability to learn and the motivation to continue learning. This book also aims to help

teachers focus on the big or powerful ideas of science rather than teaching a series of unrelated facts This leads children to an understanding of the nature and limitations of scientific activity This fully expanded and updated edition explores The compelling reasons for starting science in the primary school Within school planning in the context of less prescriptive national requirements The value of having in mind the big ideas of science The opportunities for children to learn through greater access to the internet and social networking The expanding sources of materials and guidance now available to teachers on line Greater attention to school and teacher self evaluation as a means of improving provision for children s learning The importance for both teachers and learners of reflecting on the process and content of their activities Other key aspects of teaching such as questioning the importance of discussion and dialogue the formative and summative roles of assessment and strategies for helping children to develop understanding skills positive attitudes and enjoyment of science are preserved So also is the learner centred approach with an emphasis on children learning to take some responsibility for their activities This book is essential reading for all primary school teachers and those on primary education courses

Practical Theorising in Teacher Education Katharine Burn,Trevor Mutton,Ian Thompson,2022-07-28 This insightful collection offers a timely contribution to the body of research on practical theorising in teacher education Acknowledging the importance of experience and reflective practice in teaching this book simultaneously embraces the essential need for teachers at all career stages to engage effectively and critically with evidence from research Drawing together a range of perspectives from university based and school based teacher educators this book examines the challenges and critiques advanced when practical theorising was first proposed as well as recent tensions created by the performative culture that now pervades education It illustrates the constant renegotiation and renewal necessary to sustain such an approach to beginners learning investigating a range of tools developed by teacher educators to help beginning teachers navigate these demands Demonstrating the value of practical theorising and therefore promoting powerful professional learning for practitioners this book is essential for teachers at all career stages including trainee teachers and student teachers

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee,2006-11-05 The Committee s report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14 19 year old students based on the International Baccalaureate This would ensure that

students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Use of Visual Representations Billie Eilam,John K. Gilbert,2014-07-11 This book examines the diverse use of visual representations by teachers in the science classroom It contains unique pedagogies related to the use of visualization presents original curriculum materials as well as explores future possibilities The book begins by looking at the significance of visual representations in the teaching of science It then goes on to detail two recent innovations in the field simulations and slowmation a process of explicit visualization It also evaluates the way teachers have used different diagrams to illustrate concepts in biology and chemistry Next the book explores the use of visual representations in culturally diverse classrooms including the implication of culture for teachers use of representations the crucial importance of language in the design and use of visualizations and visualizations in popular books about chemistry It also shows the place of visualizations in the growing use of informal self directed science education Overall the book concludes that if the potential of visualizations in science education is to be realized in the future the subject must be included in both pre service and in service teacher education It explores ways to develop science teachers representational competence and details the impact that this will have on their teaching The worldwide trend towards providing science education for all coupled with the increased availability of color printing access to personal computers and projection facilities has lead to a more extensive and diverse use of visual representations in the classroom This book offers unique insights into the relationship between visual representations and science education making it an ideal resource for educators as well as researchers in science education visualization and pedagogy **Connecting Girls and Science** Elaine V. Howes,2002 Shows the positive results that can

occur in secondary science classes when student s curiosity about science is brought to the centre of the curriculum In particular it demonstrates how girls can become more interested when such topics as childbirth and sexism in science are included

Teaching Undergraduate Science Linda C. Hodges,2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching

Zoo Talk Patricia G. Patrick,Sue Dale Tunnicliffe,2012-09-28 Founded on the premise that zoos are bilingual that the zoo in the shape of its staff and exhibits and its visitors speak distinct languages this enlightening analysis of the informal learning that occurs in zoos examines the speech of exhibits and staff as well as the discourse of visitors beginning in the earliest years Using real life conversations among visitors as a basis for discussion the authors interrogate children s responses to the exhibits and by doing so develop

an informal learning model and a zoo knowledge model that prompts suggestions for activities that classroom educators can use before during and after a zoo visit Their analysis of the visitor voice informs creative suggestions for how to enhance the educational experiences of young patrons By assessing visitors entry knowledge and their interpretations of the exhibits the authors establish a baseline for zoos that helps them to refine their communication with visitors for example in expanding knowledge of issues concerning biodiversity and biological conservation The book includes practical advice for zoo and classroom educators about positive ways to prepare for zoo visits engaging activities during visits and follow up work that maximizes the pedagogical benefits It also reflects on the interplay between the developing role of zoos as facilitators of learning and the ways in which zoos help visitors assimilate the knowledge on offer In addition to being essential reading for educators in zoos and in the classroom this volume is full of insights with much broader contextual relevance for getting the most out of museum visits and field trips in general
