**Concept** C. Prüll,A. Maehle,R. Halliwell,2009-06-25 The concept of specific receptors for drugs hormones and transmitters lies at the very heart of biomedicine This book is the first to consider the idea from its 19th century origins in the work of John Newport Langley and Paul Ehrlich to its development of during the 20th century and its current impact on drug discovery in the 21st century      **Representations of the Natural World in Old English Poetry** Jennifer

Neville,1999-03-13 This book examines descriptions of the natural world in a wide range of Old English poetry Jennifer Neville describes the physical conditions experienced by the Anglo Saxons the animals diseases landscapes seas and weather with which they had to contend She argues that poetic descriptions of these elements were not a reflection of the existing physical conditions but a literary device used by Anglo Saxons to define more important issues the state of humanity the creation and maintenance of society the power of individuals the relationship between God and creation and the power of writing to control information Examples of contemporary literature in other languages are used to provide a sense of Old English poetry s particular approach which incorporated elements from Germanic Christian and classical sources The result of this approach was not a consistent cosmological scheme but a rather contradictory vision which reveals much about how the Anglo Saxons viewed themselves      **From Demons and Evil Spirits to Cancer Genes** Patrick J. Needham,1965-01-02 As Dr Needham s immense undertaking gathers momentum it has been found necessary to subdivide volumes into parts each to be bound and published separately The first part of Volume 4 already published deals with the physical sciences the second with the diverse applications of physics in the many branches of mechanical engineering and the third will deal with civil and hydraulic engineering and nautical technology With this part of Volume 4 then we come to the application by the Chinese of physical principles in the control of forces and in the use of power we cross the frontier separating tools from the machine We have already noticed that the ancient Chinese concept of chhi somewhat similar to the pneuma of the Greeks asserted itself prominently in acoustics but we discover here that the Chinese tendency to think pneumatically was also responsible for a whole range of brilliant technological achievements for example the double acting piston bellows the rotary winnowing fan and the water powered metallurgical blowing machine ancestor of the steam engine as well as for some extraordinary insights and predictions in aeronautics **Psychiatry & Homoeopathy** F.
