

The 3 Levels of Social Work Explained: Micro, Mezzo, Macro

Written by [Baylor School of Social Work Team](#) on 05.31.23

Careers in social work are vast and varied. To create systems within the field, there are levels of social work that are accepted and understood by all social workers. These levels allow social workers to define their role and the larger system they're part of. If you're interested in social work but unsure what type of role you'd enjoy, consider which level of social work best suits your skills and interests.

The three levels of social work include macro, mezzo, and micro.

1. **Micro** social work is smaller units like families or relationships.
2. **Mezzo** social work describes medium sized systems like a community.
3. **Macro** social work is the larger system and policy involved in social work.

Social workers might find their primary duties within one level of social work, but most social workers are part of each level in some way.

Micro-Level Social Work

Micro-level social work describes the small units or systems that a social worker's primary duties exist within. At this level, social workers work directly with their clients in very small groups or one on one. This level is the most intimate of the three levels of social work.

If you're interested in micro-level social work, you can expect to work with individuals and/or small groups like families. At this level, you might find yourself in roles like mental health counseling, crisis intervention or [individual case management](#). You could be counseling a child through their parent's divorce or working to find shelter for someone facing housing insecurity.

It's especially important that you establish a strong rapport and sense of trust with your client at the micro level of social work. Due to its personal nature, you must be especially good at relationship building with your clients.

At the same time, deep relationship building can lead to a quicker rate of [social work burn out](#). Social workers are no stranger to burn out but at the micro level, it's more likely. As you create an open line of trust with the client, their stressors and vulnerabilities can feel very personal. For that reason, it's important to practice self-care if you're regularly in the micro level of social work.
