

MALE INFERTILITY

DEFINING INFERTILITY
Being unable to get pregnant after 1 year of unprotected sex (CDC, 2019)

COMMON CAUSES

Oxidative stress causing damaged sperm, varicoceles, sexually transmitted infections, and other health factors impact fertility (Bisht et al., 2017).

DIAGNOSTIC TESTING

Semen analysis is the first step in diagnosing infertility. A physician will check the sperm's motility, shape, and how many viable sperm there are which determines the likelihood of fertilizing an egg (Chertoff, 2018).

SEEKING MEDICAL HELP

Some cases of infertility can be fixed by surgery. Other cases may require assisted reproductive technology, hormone balancing, antibiotics and other medications (Mayo Clinic, 2020).

ASSISTED REPRODUCTIVE TECHNOLOGY

Isolating a sperm to artificially fertilize an egg out side of the body, or is injected into a female by a medical professional. Intracytoplasmic sperm injection is one of the most common procedures (ASRM, 2014).

OTHER CONCERNS

The topic of infertility may be difficult to discuss. This is not an uncommon problem and there are solutions. Total health and wellness are essential in aiding fertility prospects. Men may seek support from online groups and organizations for men going through the same problems (Miner et al., 2019).
