*Geographical Thought* Lalita Rana, 2014-01-01. Geographical thought at any point in time is a manifestation of the prevailing viewpoints and methodological approaches in vogue. The development of geography has a history of evolution of over 2000 years. The discipline has been crafted over time to incorporate ideas from various schools of thought and several other disciplines from ancient to modern times. The existing methodology and the subject matter of Geography is a reflection of this assemblage and evolution. The nature of development remained more philosophical up to modern period. The First edition of this book published in 2008 was an attempt towards compilation of relevant study material on evolution of Geographic thought in a systematic way up to the modern period. The book has been revised with the addition of two elaborated sections i.e. one each on the Classical and the Contemporary tradition in geography. However the major thrust of present book is on the nature of geographic developments in its contemporary phase. More recently the anthropocentrism and a concern about methodology are more evident in the development of discipline.

**Routes to the Information Revolution** Alexander Arbel, 2019-03-18. This book is a precise and comprehensive history of the digital computer. It is the first collection of available information about the digital computer beginning with the philosophical and logical advancements in the early 20th century that led to it. The book explores the histories and stories of the computer tracing its roots and routes. It examines and analyzes commonly accepted views on the digital computer and its development and offers clearer and more accurate alternatives to them. Its approach though dealing with the introduction and development of the digital computer is applicable to the history of technology in general. The central question considered here is why were the automatic digital program controlled calculating devices developed simultaneously in Germany, the USA and the UK during the period 1935-1945. Astonishingly the technologies, ideas, calculating means and calculating techniques existed and were available long before the development of the automatic digital program controlled calculating device. However only during the period 1935-1945 did they materialize. Ideas that may be viewed as attempts to develop this type of device began early in the modern era. Babbage 1834 and Ludgate 1909 took the first steps and constructed devices that may be viewed as something like computers. Nevertheless the concrete fulfillment and practical use of these ideas was accomplished only in the period of 1935-1945 by a group of developers who acted in ignorance of what was done before. This book opens with a detailed discussion of
