Mathematical Logic Daniel Cunningham, 2023-05-22 Mathematical Logic An Introduction is a textbook that uses mathematical tools to investigate mathematics itself In particular the concepts of proof and truth are examined The book presents the fundamental topics in mathematical logic and presents clear and complete proofs throughout the text Such proofs are used to develop the language of propositional logic and the language of first order logic including the notion of a formal deduction The text also covers Tarski's definition of truth and the computability concept It also provides coherent proofs of Gödel's completeness and incompleteness theorems Moreover the text was written with the student in mind and thus it provides an accessible introduction to mathematical logic In particular the text explicitly shows the reader how to prove the basic theorems and presents detailed proofs throughout the book Most undergraduate books on mathematical logic are written for a reader who is well versed in logical notation and mathematical proof This textbook is written to attract a wider audience including students who are not yet experts in the art of mathematical proof
