*Mathematical Principles of Optical Fiber Communications* J. K. Shaw, 2004-01-01 Annotation With the maturing of mobile portable telephony and the emerging broadband access market greater fiber transmission capacity will be essential in the early 21st century Since the demand for more capacity drives the development of new optics based technologies fiber optics therefore remains a vibrant area for research Mathematical Principles of Optical Fiber Communications is intended to support and promote interdisciplinary research in optical fiber communications by providing essential background in both the physical and mathematical principles of the discipline Chapter topics include the basics of fibers and their construction fiber modes and the criterion of single mode operation the nonlinear Schrödinger equation the variational approach to the analysis of pulse propagation and finally solitons and some new results on soliton formation energy thresholds These chapters are written to be as independent as possible while taking the reader to the frontiers of research on fiber optics communications

(USA), Conference Board of the Mathematical Sciences (United States), Fundamentals of Radar Imaging Margaret Cheney, Brett Borden, 2009-10-08 Radar imaging is a mathematically rich subject with many interesting applications and a large variety of challenging mathematical open problems The goal of this book is to provide mathematicians with the background they need to work in the field building on the foundation of the underlying partial differential equations The focus is on showing the connection between the physics and the mathematics and on supplying an intuitive mathematical understanding of basic concepts The book includes a description of how a radar system works together with the relevant mathematics theory that guides the choice of radar waveforms derivation of the fundamentals of scattering theory derivation and discussion of the image formation process and a long list of current open problems Readers are assumed to be familiar with the Fourier transform Other assumed background material includes certain basic facts from vector calculus complex variables linear algebra and physics

**The Mathematics of Diffusion** Wei-Ming Ni, 2011-10-13 Diffusion has been used extensively in many scientific disciplines to model a wide variety of phenomena The Mathematics of Diffusion focuses on the qualitative properties of solutions to nonlinear elliptic and parabolic equations and systems in connection with domain geometry various boundary conditions the mechanism of different diffusion rates and the interaction between diffusion and spatial heterogeneity The book systematically explores the interplay between different diffusion rates from the viewpoint of pattern formation particularly Turing's diffusion driven instability in both homogeneous and heterogeneous environments and the roles of random diffusion directed movements and spatial heterogeneity in the classical Lotka Volterra competition systems Interspersed throughout the book are many simple fundamental and important open problems for readers to investigate
