Everything is always the same at Grandpa's house even the things he says until one unusual morning **The Origins and Development of High Ability** Gregory R. Bock, Kate Ackrill, 2008-04-30 Written for psychologists educational psychologists and developmental biologists this volume explores the concept of giftedness including its definition origins and development The author offers a balanced view of the topic and presents optimal educational strategies for various kinds of high ability The effects of both environmental and biological genetic factors on a student's level of giftedness are also discussed as is the question of whether gifted people can be created *Learning and Motivation in the Classroom* Scott G. Paris, Gary M. Olson, Harold W. Stevenson, 2017-09-13 Throughout the twentieth century there had been substantial links between scientific psychology and education Binet Dewey Thorndike and other early pioneers were strongly interested in both realms Taking advantage of a period of enthusiasm this title originally published in 1983 looks at the amalgamation of the recent advances at the time in theory and research in education and psychology with a particular focus on cognition motivation and social policy This volume presents and discusses the implications of this work on learning and motivation for educational policy

The Routledge International Handbook of Innovation Education Larisa V. Shavinina, 2013-03-25 The Routledge International Handbook of Innovation Education is the international reference work on innovation education and potentially opens an entirely new direction in education The overall goal of the handbook is to address the question of how to develop innovators in general and how to develop the innovative potential of today's young people **From Giftedness to Gifted Education** Matthew C. Makel, Anne N. Rinn, Jonathan A. Plucker, 2021-09-09 The fields of gifted education and talent development have numerous theories and conceptions for how to identify and serve students This book helps introduce and apply these ideas to help reflect theory in practice Each chapter introduces readers to a different theory by providing definitions of key concepts explaining the fundamental conceptual theoretical approach and concluding with advice on how the conception can be put into practice Suggestions for further reading are also provided Some chapters are based on theories that have been around for decades and some have been developed more recently But all chapters focus on helping empower readers to understand and take action without having to reinvent the wheel **The Nature of Mathematical Thinking** Robert J. Sternberg, Talia Ben-Zeev, 2012-10-12 Why do some children seem to learn mathematics easily and others slave away at it learning it only with great effort and apparent pain Why are some people good at algebra but terrible at geometry How can people who successfully run a business as adults have been failures at math in school How come some professional mathematicians suffer terribly when trying to balance a checkbook And why do school children in the United States perform so dismally in international comparisons These are the kinds of real questions the editors set out to answer or at least address in editing this book on mathematical thinking Their goal was to seek a diversity of contributors representing

multiple viewpoints whose expertise might converge on the answers to these and other pressing and interesting questions regarding this subject The chapter authors were asked to focus on their own approach to mathematical thinking but also to address a common core of issues such as the nature of mathematical thinking how it is similar to and different from other kinds of thinking what makes some people or some groups better than others in this subject area and how mathematical thinking can be assessed and taught Their work is directed to a diverse audience psychologists interested in the nature of mathematical thinking and abilities computer scientists who want to simulate mathematical thinking educators involved in teaching and testing mathematical thinking philosophers who need to understand the qualitative aspects of logical thinking anthropologists and others interested in how and why mathematical thinking seems to differ in quality across cultures and laypeople and others who have to think mathematically and want to understand how they are going to accomplish that feat

Approaches to Positive Youth Development Rainer K Silbereisen, Richard M Lerner, 2007-08-21 Scientific research and science guided practice based on the promotion of an individual's strengths constitutes a radical shift in a new and growing area of study within the field of human development Its trademark term is positive youth development This approach to human development is based on the idea that in addition to preventing problems science and practice should promote the development of competencies skills and motivation in order to enhance individuals developmental pathways Approaches to Positive Youth Development is based on this concept and brings together authors from across Europe and America who are leaders in their respective fields The main focus of the book beyond a clarification of the paradigmatic foundations concerns the major contexts of adolescents and young adults namely neighbourhoods and leisure locales school and family and the major themes of healthy psychosocial development namely competences and knowledge prosocial behaviour transcending problems of delinquency civic engagement identity agency and spirituality *Mathematical Talent* Daniel P. Keating, 1974

Humans as Self-Constructing Living Systems Martin E. Ford, Donald H. Ford, 2019-03-04 Originally published in 1987 the purpose of this companion volume to Donald Ford's 1987 *Humans as Self Constructing Living Systems A Developmental Perspective on Personality and Behavior* was to illustrate the potential utility of the Living Systems Framework LSF for stimulating new theoretical advances for guiding research on human behavior and development and for facilitating the work of the health and human service professions Although not exactly a how to manual it does provide many concrete examples of how and when the framework can be used to guide scholarly and professional activities It also provides a concise overview of the framework itself that can help those who have read the theoretical volume refresh their memory and assist those who have not in understanding the basic concepts of the LSF and in deciding whether and how the framework might be useful to them The Wiley Handbook of Genius Dean Keith Simonton, 2014-06-04 With contributions from a multi disciplinary group of expert contributors this is the first handbook to discuss all aspects of genius a topic that endlessly provokes and fascinates The first handbook to discuss all aspects of genius with contributions from a multi disciplinary group of experts Covers the

E. Richardson Professor of Psychology in the Department of Human Sciences Brunel University, Paula J. Caplan Professor of Psychology in the Department of Human Sciences Brunel University, Mary Crawford Professor of Psychology in the Department of Human Sciences Brunel University, Janet Shibley Hyde Professor of Psychology in the Department of Human Sciences Brunel University, 1997-08-12 This volume in the Counterpoints Series summarizes and addresses the validity of research into gender differences It also questions the ideology behind this research and its consequences The work is intended for researchers and students in the field of cognitive psychology and women s studies and psychologists interested in gender issues Investigations in Mathematics Education ,1976 Best Practices in Gifted Education Ann Robinson, Bruce M. Shore, Donna Enersen, 2021-09-03 A gifted education Legacy Award winner Best Practices in Gifted Education provides concise up to date research based advice to educators administrators and parents of gifted and talented youth The 29 practices included in this volume are the result of an extensive examination of educational research on what works with talented youth The interest in culturally diverse and low income learners the means to identify talents and the need for curriculum that appropriately challenges high ability youth constitute just a few of the 29 practices Each practice is organized into a chapter containing two sections What We Know and What We Can Do The first section briefly describes the practice and summarizes the research The second section suggests what course of action a parent teacher or administrator might take at home in the classroom or at school The book is a must have for those who want a guide that makes a connection between research and practical action in gifted education A service publication of the National Association for Gifted Children Washington DC This designation indicates that this book has been jointly developed with NAGC and that this book passes the highest standards of scholarship research and practice Gender and Fair Assessment Warren W. Willingham, Nancy S. Cole, 2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much

attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience
