## **Mathematical Theory Of Chromatic Plane Ornaments:**

*The Mathematical Theory of Chromatic Plane Ornaments* Thomas W. Wieting, 1982 The object of this book is to develop the coloring theory for plane ornaments that is for periodic tilings of the Euclidean plane Such tilings derive from the ornamental art of diverse cultures from Sumerian cone mosaics from Egyptian tomb paintings from Chinese window lattices from Greek border mosaics and vase paintings from Islamic wall mosaics from African textiles In each of these and in many other cases artisans have designed plane ornaments of marvelous variety and complexity Nevertheless every plane ornament respects certain principles of composition and hence must fall into one of a limited number of classes Similarly every coloration of such an ornament respects certain rules of distribution and hence must fall into one of a limited number of subclasses The object of this book then is to define the criterion by which chromatic plane ornaments shall be classified and to develop procedures by which the classification may be implemented Preface
