

Cosmic Strings

Cosmic strings are predicted to have formed when ancient force fields were frozen in the fabric of spacetime, by inflation of superstrings, or by collision.

1. An ancient force field frozen

2. A hypothetical superstring inflates

3. Strings interact

Cosmic Strings: are a hypothetical 1-dimensional (spatially) topological defect in the fabric of spacetime left over from the formation of the universe.

Interaction could create fields of closed timelike curves permitting backwards time travel.

Contact Interactions in Quantum Mechanics: Theory, Mathematical Aspects and Applications Manuel Gadella, Luiz A. Manzoni, José Tadeu Lunardi, 2021-03-12 **Exact Space-Times in Einstein's General Relativity** Jerry B. Griffiths, Jiří Podolský, 2009-10-15 Einstein's theory of general relativity is a theory of gravity and as in the earlier Newtonian theory much can be learnt about the character of gravitation and its effects by investigating particular idealised examples This book describes the basic solutions of Einstein's equations with a particular emphasis on what they mean both geometrically and physically Concepts such as big bang and big crunch types of singularities different kinds of horizons and gravitational waves are described in the context of the particular space times in which they naturally arise These notions are initially introduced using the most simple and symmetric cases Various important coordinate forms of each solution are presented thus enabling the global structure of the corresponding space time and its other properties to be analysed The book is an invaluable resource both for graduate students and academic researchers working in gravitational physics
