**Mathematical Methods for Digital Computers** Anthony Ralston, Herbert S. Wilf, Kurt Enslein, 1960      **Computer Programming in Quantitative Biology** R.G. Davies, 2012-12-02 Computer Programming in Quantitative Biology covers the general background of Fortran coding and the more sophisticated computer programs likely to be encountered in quantitative biology It discusses the application of over 40 appropriate and easily adaptable programming techniques to problems of major biological interest Organized into 15 chapters the book starts by providing an introductory outline of computer structure and function needed to appreciate many basic programming procedures A chapter discusses some general principles underlying Fortran coding and the use of digital computers with emphasis on major features of Fortran IV Other chapters present short introduction to the statistical or mathematical techniques in each of the main sections under which program are described These chapters also provide some aspects of matrix algebra that are essential for serious statistical programming and offer a general guide to efficiency in programming All complete programs are accompanied by a flowchart and a detailed discussion This book is a valuable source of information for biologists computational biologists research biologists undergraduate students and advanced or specialized students of biology      **Legal Protection for Computer-Implemented Inventions** Sabine Kruspig, Claudia Schwarz, 2016-04-24 As a result of the incorporation of computer software into countless commercial and industrial products the patentability of software has become a vital issue in intellectual property law This indispensable book provides an overview on the current status of computer implemented inventions in patent law across Europe and major jurisdictions worldwide A hugely practical field research tool with guidance based on case law it examines the major hurdles in each particular country and describes the best practice to be adopted Clearly showing how enforceable software patent applications can be competitively drafted and how a patent portfolio for computer implemented inventions can be established in several countries without spending money unnecessarily on problematic examination proceedings this book covers such issues and topics as the following claim categories for patent applications sufficient level of abstraction breadth of the claimed invention fundamental terms of computing and terminological traps probability for patents dependent on software application areas and patents in core areas of computing With separate chapters for the key countries Germany the United Kingdom France the United States China Korea Japan India and the European Patent Office the legal situation for computer implemented inventions in each country or region this book includes guidance on prosecution under national law analyses of relevant court decisions practice checklists and an outlook on future developments The authors describe claim formulation based on actual cases and on principles of computer science in order to show what might be or might not be patentable in each jurisdiction With this incomparable resource patent attorneys and patent professionals in companies will get a basis for making decisions about the most appropriate jurisdictions in which to file patent applications This book will also be of great value to computer professionals who are

affected by the protection of software or who are actively involved in the protection of software by patent law **NBS Special Publication** ,1965 **U.S. Government Research Reports** ,1964 **Computers and Data Processing Systems** ,1962 **KWIC Index for Numerical Algebra** Alston Scott Householder,1972 Computer Literature Bibliography United States. Youden,1965 Nuclear Science Abstracts ,1974-07 *National Bureau of Standards Miscellaneous Publication* ,1965 Digital Computer User's Handbook Melvin Klerer,1967 Compendium of digital computer procedures covers systems design language functions simulation mathematical analysis and statistical methodologies information storage and retrieval supply systems linear programming etc and includes a glossary of sorting and merging terms a list of computer equipment together with characteristics thereof and a directory of firms of the electronics industry manufacturing computers Bibliographies and references after each chapter *Miscellaneous Publication - National Bureau of Standards* United States. National Bureau of Standards,1965 Digital Curricula in School Mathematics Meg Bates,Zalman Usiskin,2016-02-01 The mathematics curriculum what mathematics is taught to whom it is taught and when it is taught is the bedrock to understanding what mathematics students can could and should learn Today s digital technology influences the mathematics curriculum in two quite different ways One influence is on the delivery of mathematics through hardware such as desktops laptops and tablets Another influence is on the doing of mathematics using software available on this hardware but also available on the internet calculators or smart phones These developments rapidly increasing in their availability and decreasing in their cost raise fundamental questions regarding a mathematics curriculum that has traditionally been focused on paper and pencil work and taught in many places as a set of rules to be practiced and learned This volume presents the talks given at a conference held

in 2014 at the University of Chicago sponsored by the Center for the Study of Mathematics Curriculum The speakers experts from around the world and inside the USA were asked to discuss one or more of the following topics changes in the nature and creation of curricular materials available to students transformations in how students learn and how they demonstrate their learning rethinking the role of the teacher and how students and teachers interact within a classroom and across distances from each other The result is a set of articles that are interesting and captivating and challenge us to examine how the learning of mathematics can and should be affected by today s technology      *Advances in Intelligent Systems, Computer Science and Digital Economics* Zhengbing Hu, Sergey Petoukhov, Matthew He, 2020-01-23 This book comprises high quality refereed research papers presented at the 2019 International Symposium on Computer Science Digital Economy and Intelligent Systems CSDEIS2019 The symposium held in Moscow Russia on 4 6 October 2019 was organized jointly by Moscow State Technical University and the International Research Association of Modern Education and Computer Science The book discusses the state of the art in areas such as computer science and its technological applications intelligent systems and intellectual approaches and digital economics and methodological approaches It is an excellent reference resource for researchers undergraduate and graduate students engineers and management practitioners interested in computer science and its applications in engineering and management      **NASA Scientific and Technical Reports** United States.
