Phase Transitions: A Brief Account With Modern Applications Moshe Gitterman,Vivian (Haim) Halpern,2004-08-03 This book presents a short fairly simple course on the basic theory of phase transitions and its modern applications In physics these applications include such modern developments as Bose Einstein condensation of atoms high temperature superconductivity and vortices in superconductors while in other fields they include small world phenomena and scale free systems such as stock markets and the Internet The advantage of treating all these topics together lies in showing their connection with one another and with the general theory of phase transitions

Developing Learner-Centered Teaching Phyllis Blumberg,2017-07-27 Developing Learner Centered Teaching offers a step by step plan for transforming any course from teacher centered to the more engaging learner centered model Filled with self assessments and worksheets that are based on each of the five practices identified in Maryellen Weimer s Learner Centered Teaching this groundbreaking book gives instructors faculty developers and instructional designers a practical and effective resource for putting the learner centered model into action

Making the Connection Marilyn Paula Carlson,Chris Rasmussen,2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching

mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction

Cohomological Methods in Transformation Groups C. Allday,V. Puppe,1993-07 This is an account of the theory of certain types of compact transformation groups namely those that are susceptible to study using ordinary cohomology theory and rational homotopy theory which in practice means the torus groups and elementary abelian p groups The efforts of many mathematicians have combined to bring a depth of understanding to this area However to make it reasonably accessible to a wide audience the authors have streamlined the presentation referring the reader to the literature for purely technical results and working in a simplified setting where possible In this way the reader with a relatively modest background in algebraic topology and homology theory can penetrate rather deeply into the subject whilst the book at the same time makes a useful reference for the more specialised reader **Catalogue** Boston University,1903 *Elliptic Systems of Phase*

Transition Type Nicholas D. Alikakos,Giorgio Fusco,Panayotis Smyrnelis,2019-01-21 This book focuses on the vector Allen Cahn equation which models coexistence of three or more phases and is related to Plateau complexes non orientable objects with a stratified structure The minimal solutions of the vector equation exhibit an analogous structure not present in the scalar Allen Cahn equation which models coexistence of two phases and is related to minimal surfaces The 1978 De Giorgi conjecture for the scalar problem was settled in a series of papers Ghoussoub and Gui 2d Ambrosio and Cabre 3d Savin up to 8d and del Pino Kowalczyk and Wei counterexample for 9d and above This book extends in various ways the Caffarelli Cordero density estimates that played a major role in Savin's proof It also introduces an alternative method for obtaining pointwise estimates Key features and topics of this self contained systematic exposition include Resolution of the structure of minimal solutions in the equivariant class a for general point groups and b for general discrete reflection groups thus establishing the existence of previously unknown lattice solutions Preliminary material beginning with the stress energy tensor via which monotonicity formulas and Hamiltonian and Pohozaev identities are developed including a self contained exposition of the existence of standing and traveling waves Tools that allow the derivation of general properties of minimizers without any assumptions of symmetry such as a maximum principle or density and pointwise estimates Application of the general tools to equivariant solutions rendering exponential estimates rigidity theorems and stratification results This
