Mathematics In Action Applications In Aerodynamics Statistics Weather Prediction And Other Sciences:

Mathematics in Action, 1984 Mathematics in Action Oliver Graham Sutton, 1984 According to Sir Graham Sutton The task of the applied mathematician is exactly that of using the tools provided by pure mathematics to clarify and extend the observations of the physicist Phenomena must be measured and reduced to number in order to become part of the body of scientific knowledge It is the purpose of this book to show that process in action Unlike many texts in this area this straightforward account is written for the layman and is accessible to high school students and undergraduates anyone with a grasp of rudimentary calculus Moreover its generalized view of the topic makes the book of special interest to young mathematicians physicists and engineers In illuminating the nature of applied mathematics and its influence on modern ideas concerning the physical nature of the universe the author illustrates his points with examples from ballistics automatic calculating machines radio waves atoms and electrons theory of flight statistics and meteorology The book is divided into seven chapters I The Mathematician and his Task II Tools of the trade III Ballistics or Newtonian dynamics in war IV An essay on waves V Mathematics of flight VI Statistics or the weighing of evidence VII Mathematics and the weather In the first two chapters Sir Graham gives a lucid account of the role of the mathematician in applied science and the nature of his tools covering such topics as theories of physics mathematical techniques complex numbers new geometries and atomistic and field theories of physics The remaining five chapters are devoted to specific applications in ballistics gunnery as an exact science calculation of trajectories etc waves waves in the natural world Fourier series waves and particles etc mathematics of flight fundamentals of fluid motion theory Joukowski's solution of the two dimension aerofoil problem etc as well as applications in statistics and meteorology from back cover *Heart's Vortex* Ares Pasipoularides, 2009-11 This outstanding resource provides a comprehensive guide to intracardiac blood flow phenomena and cardiac hemodynamics including the developmental history theoretical frameworks computational fluid dynamics and practical applications for clinical cardiology cardiac imaging and embryology It is not a mere compilation of the most up to date scientific data and relevant concepts Rather it is an integrated educational means to developing pluridisciplinary background knowledge and understanding Such understanding allows an appreciation of the crucial albeit heretofore generally unappreciated importance of intracardiac blood flow phenomena in a host of multifaceted functional and morphogenetic cardiac adaptations The book includes over 400 figures which were prepared by the author and form a vital part of the pedagogy It is organized in three parts Part I Fundamentals of Intracardiac Flows and Their Measurement provides comprehensive background from many disciplines that are necessary for a deep and broad understanding and appreciation of intracardiac blood flow phenomena Such indispensable background spans several chapters and covers necessary mathematics a brief history of the evolution of ideas and methodological approaches that are relevant to cardiac fluid dynamics and imaging a qualitative introduction to fluid dynamic stability theory chapters on physics and fluid dynamics of unsteady blood flows and an intuitive introduction to

various kinds of relevant vortical fluid motions Part II Visualization of Intracardiac Blood Flows Methodologies Frameworks and Insights is devoted to pluridisciplinary approaches to the visualization of intracardiac blood flows It encompasses chapters on 3 D real time and live 3 D echocardiography and Doppler echocardiography CT tomographic scanning modalities including multidetector spiral helical dataset acquisitions MRI and cardiac MRA including phase contrast velocity mapping PCVM etc An entire chapter is devoted to the understanding of post processing exploration techniques and the display of tomographic data including slice and dice 3 D techniques and cine MRI Part II also encompasses an intuitive introduction to CFD as it pertains to intracardiac blood flow simulations followed in separate chapters by conceptually rich treatments of the computational fluid dynamics of ejection and of diastolic filling An entire chapter is devoted to fluid dynamic epigenetic factors in cardiogenesis and pre and postnatal cardiac remodeling and another to clinical and basic science perspectives and their implications for emerging research frontiers Part III contains an Appendix presenting technical aspects of the method of predetermined boundary motion PBM developed at Duke University by the author and his collaborators **Books in Print**

Ksenia Tatarchenko,2024-10-03 At first glance the Novosibirsk Scientific Center or Akademgorodok appears as an outlier in academic excellence This science city is renowned for a preeminent university dozens of research institutes and a thriving technopark At home it is an emblem of Russian innovation abroad it is often portrayed as a potential threat a breeding ground of cyber soldiers Though Siberia has been the main source of post 1991 Russian carbon revenues its soviet history and cold war legacy of internationalism demonstrates that territorial and scientific dimensions interlocked the moment the Siberian Branch of the Soviet Academy of Sciences was created in 1957 Drawing on a wide range of previously unexplored archives Soviet SCI_BERIA focuses on how the post Stalinist Siberia was redefined and represented through the ideal of rational development the late socialist innovation practices and the relationship between experts and the state It offers a fresh insight into the transition from Soviet to post Soviet Akademgorodok In doing so Tatarchenko not only fosters a conversation between history area studies and science studies but also sheds new light on Soviet modernity and the limits of its transformative projects
