Modern Perspectives in Type-Theoretical Semantics Stergios Chatzikyriakidis, Zhaohui Luo, 2017-02-07. This book is a collective volume that reports the state of the art in the applications of type theory to linguistic semantics. The volume fills a 20 year gap from the last published book on the issue and aspires to bring researchers closer to cutting edge alternatives in formal semantics research. It consists of unpublished work by some key researchers on various issues related to the type theoretical study of formal semantics and further exemplifies the advantages of using modern type theoretical approaches to linguistic semantics. Themes that are covered include modern developments of type theories in formal semantics, foundational issues in linguistic semantics like anaphora, modality and plurals, innovative interdisciplinary research like the introduction of probability theory to type theories as well as computational implementations of type theoretical approaches. This volume will be of great interest to formal semanticists that are looking for alternative ways to study linguistic semantics but will also be of interest to theoretical computer scientists and mathematicians that are interested in the applications of type theory.

Text and Math Into LaTeX George Gratzer, 2024-04-16. For more than 30 years this comprehensive manual has been the standard introduction and complete reference for writing articles and books containing mathematical formulas. This sixth edition uses a slightly changed title *Text and Math into LaTeX* to emphasize the importance of text in mathematical scientific composition. Sections that contained commands no longer much needed such as `includeonly` and the introductory sections to PDF, now ubiquitous, have been omitted. Many sections are now enhanced with discussion of new and useful packages. An occasional encouragement for the reader to consult ChatGPT for confirmation on various points illustrates the positive relationship between ChatGPT and LaTeX. The new Chapter 17 describes recent developments that enhance or replace BibTeX and the new Appendix C introduces the reader to ChatGPT. Key features: An example based visual approach and a gentle introduction with the Short Course. A detailed exposition of multiline math formulas with a Visual Guide. A unified approach to TeX, LaTeX and the AMS enhancements. A quick introduction to creating presentations with formulas. A detailed approach to creating illustrations. Extras are provided on SpringerLink for the following chapters 1, 2, 3, 4, 6, 7, 10, 11, 13, 14, 15, 16, 17, 18 and Appendices A, B. Readers must visit the HTML version of each chapter and access the Electronic Supplementary Material. Extras for Appendices A, B can be found in Extras for Chapter 18.

*Challenging Mathematics In and Beyond the Classroom* Edward J. Barbeau, Peter J. Taylor, 2009-04-21. In the mid 1980s the International Commission on Mathematical Instruction (ICMI) inaugurated a series of studies in mathematics education by commissioning one on the influence of technology and informatics on mathematics and its teaching. These studies are designed to thoroughly explore topics of temporary interest by gathering together a group of experts who prepare a Study

Volume that provides a considered assessment of the current state and a guide to further developments Studies have embraced a range of issues some central such as the teaching of algebra some closely related such as the impact of history and psychology and some looking at mathematics education from a particular perspective such as cultural differences between East and West These studies have been commissioned at the rate of about one per year Once the ICMI Executive decides on the topic one or two chairs are selected and then in consultation with them an International Program Committee IPC of about 12 experts is formed The IPC then meets and prepares a Discussion Document that sets forth the issues and invites interested parties to submit papers These papers are the basis for invitations to a Study Conference at which the various dimensions of the topic are explored and a book the Study Volume is sketched out The book is then put together in collaboration mainly using electronic communication The entire process typically takes about six years

**Guide to Information Sources in Mathematics and Statistics** Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free
