World Scientific Reference On Spin In Organics (In 4 Volumes) Zeev Valy Vardeny,Markus

Wohlgenannt,2017-12-27 This reference work on Spin in Organics contains four volumes dedicated to spin injection spin transport spin pumping organic magnetic field effect and molecular spintronics The field of Organic Spintronics has accelerated and matured in the last dozen years with the realization of an organic spin valve in 2004 and magneto resistance and magneto electroluminescence in organic optoelectronic devices 2006 The book series is comprehensive in that it summarizes all aspects of Organic Spintronics to date The first two volumes deal with spin injection spin transport spin manipulation and spin pumping into organic semiconductors The main device that is thoroughly discussed here is the organic

spin valve where spinterface states at the interface between the organic semiconductor and the ferromagnetic FM electrode has been the focus of many chapters An interesting emerging subject is the role of chirality in the organic layer of the device A relatively new method of achieving spin aligned carriers in organic semiconductors is spin pumping where magnons in the FM substrate generate spin aligned carriers in the organic layer at the FM organic interface The third volume deals mainly with magnetic field effect in organic devices Several spin mixture processes that lead to magnetic field effect in devices and films are thoroughly discussed such as hyperfine interaction direct spin orbit coupling indirect spin orbit coupling via g triplet triplet annihilation and thermal spin alignment The similarity between the magnetic field effect obtained in optoelectronic devices based on organic semiconductors and the novel hybrid organic inorganic semiconductors is also a subject of intense interest The fourth volume deals with spin in molecular films and devices It includes thorough discussion of spin exchange interaction that leads to organic ferromagnets as well as manifestation of various spin interactions in thin molecular films and devices
